TABLE OF CONTENTS

List of Tables	v
List of Figures	xxxvii
Introduction	1
Highlights	3
Chapter 1. Characteristics of Admissions: 2017	7
Chapter 2. Type of Treatment Services: 2017	9
Chapter 3. Trends in Substance Use Treatment Admissions Aged 12 Years and Older: 2007–2017	11
Chapter 4. Discharge Data Overview for All Types of Treatment Services: 2017	15
Chapter 5. Treatment Admissions Aged 12 Years and Older, by State or Jurisdiction, Primary Substance Use, and Selected Characteristics: 2017	19
Chapter 6. Treatment Discharges Aged 12 Years and Older, by Reason for Discharge and by State or Jurisdiction: 2017	21

Introduction.....	689
History	690
State Data Collection Systems	690
Report-Specific Considerations.....	693
Appendix B. TEDS Data Elements	711
TEDS Minimum Data Set.....	711
TEDS Supplemental Data Set	719
TEDS Linked Discharge Data Set	724
Appendix C. List of Contributors	727

LIST OF TABLES

National Substance Use Treatment Service Admissions

1.1a	Admissions aged 12 years and older, by primary substance use: Number, 2007–2017.....	24
1.1b	Admissions aged 12 years and older, by primary substance use: Percent distribution, 2007–2017	25
1.2	Admissions aged 12 years and older, by co-occurring use of alcohol and drugs: Number and percent distribution, 2007–2017	26
1.3a	Admissions aged 12 years and older, by gender and age at admission: Number and average age at admission, 2007–2017.....	27
1.3b	Admissions aged 12 years and older, by gender and age at admission: Percent distribution, 2007–2017, and 2017 U.S. population aged 12 years and older.....	28
1.4	Admissions aged 12 years and older, by race/ethnicity: Number and percent distribution, 2007–2017, and 2017 U.S. population aged 12 years and older.....	29
1.5a	Admissions aged 18 years and older, by employment status: Number, 2007–2017, and 2017 U.S. population aged 18 years and older.....	30
1.5b	Admissions aged 18 years and older, by employment status: Percent distribution, 2007–2017, and 2017 U.S. population aged 18 years and older	31
2.1a	Gender and age at admission among admissions aged 12 years and older, by primary substance use: Number and average age at admission, 2017.....	32
2.1b	Gender and age at admission among admissions aged 12 years and older, by primary substance use: Column percent distribution and average age at admission, 2017	33
2.1c	Gender and age at admission among admissions aged 12 years and older, by primary substance use: Row percent distribution, 2017	34
2.2a	Race/ethnicity among admissions aged 12 years and older, by primary substance use: Number, 2017.....	35
2.2b	Race/ethnicity among admissions aged 12 years and older, by primary substance use: Percent distribution, 2017	36
2.3a	Selected race/ethnicity/gender/age group among admissions aged 12 years and older, by primary substance use: Number, 2017	37

LIST OF TABLES (CONTINUED)

2.3b	Selected race/ethnicity/gender/age group among admissions aged 12 years and older, by primary substance use: Column percent distribution, 2017	41
2.3c	Selected race/ethnicity/gender/age group among admissions aged 12 years and older, by primary substance use: Row percent distribution, 2017	45
2.4a	Frequency of use and usual route of administration among admissions aged 12 years and older, by primary substance use: Number, 2017.....	49
2.4b	Frequency of use and usual route of administration among admissions aged 12 years and older, by primary substance use: Percent distribution, 2017	50
2.5a	Frequency of use and usual route of administration among admissions aged 12 years and older, by secondary substance use: Number, 2017	51
2.5b	Frequency of use and usual route of administration among admissions aged 12 years and older, by secondary substance use: Percent distribution, 2017.....	52
2.6a	Frequency of use and usual route of administration among admissions aged 12 years and older, by tertiary substance use: Number, 2017.....	53
2.6b	Frequency of use and usual route of administration among admissions aged 12 years and older, by tertiary substance use: Percent distribution, 2017	54
2.7a	Age of first use and number of prior treatment episodes among admissions aged 12 years and older, by primary substance use: Number, 2017	55
2.7b	Age of first use and number of prior treatment episodes among admissions aged 12 years and older, by primary substance use: Percent distribution, 2017.....	56
2.8a	Treatment referral source and detailed criminal justice referral among admissions aged 12 years and older, by primary substance use: Number, 2017	57
2.8b	Treatment referral source and detailed criminal justice referral among admissions aged 12 years and older, by primary substance use: Percent distribution, 2017	58
2.9a	Type of treatment service at admission and planned medication-assisted opioid therapy among admissions aged 12 years and older, by primary substance use: Number, 2017.....	59
2.9b	Type of treatment service at admission and planned medication-assisted opioid therapy among admissions aged 12 years and older, by primary substance use: Percent distribution, 2017	60

LIST OF TABLES (CONTINUED)

2.10a	Employment status and detailed not in labor force among admissions aged 18 years and older, by primary substance use: Number, 2017.....	61
2.10b	Employment status and detailed not in labor force among admissions aged 18 years and older, by primary substance use: Percent distribution, 2017	62
2.11a	Education, marital status, living arrangements, and pregnancy status among admissions aged 12 to 17 years, by primary substance use: Number, 2017.....	63
2.11b	Education, marital status, living arrangements, and pregnancy status among admissions aged 12 to 17 years, by primary substance use: Percent distribution, 2017	64
2.12a	Education, marital status, living arrangements, pregnancy status, and veteran status among admissions aged 18 years and older, by primary substance use: Number, 2017.....	65
2.12b	Education, marital status, living arrangements, pregnancy status, and veteran status among admissions aged 18 years and older, by primary substance use: Percent distribution, 2017	67
2.13a	Co-occurring mental and substance use disorders and DSM criteria diagnosis among admissions aged 12 years and older, by primary substance use: Number, 2017	69
2.13b	Co-occurring mental and substance use disorders and DSM criteria diagnosis among admissions aged 12 years and older, by primary substance use: Percent distribution, 2017.....	70
2.14a	Source of income/support among admissions aged 18 years and older, by primary substance use: Number, 2017	71
2.14b	Source of income/support among admissions aged 18 years and older, by primary substance use: Percent distribution, 2017	72
2.15a	Type of health insurance and expected/actual primary source of payment among admissions aged 12 years and older, by primary substance use: Number, 2017.....	73
2.15b	Type of health insurance and expected/actual primary source of payment among admissions aged 12 years and older, by primary substance use: Percent distribution, 2017	74

LIST OF TABLES (CONTINUED)

2.16a	Arrests in 30 days prior to admission and days waiting to enter treatment among admissions aged 12 years and older, by primary substance use: Number, 2017.....	75
2.16b	Arrests in 30 days prior to admission and days waiting to enter treatment among admissions aged 12 years and older, by primary substance use: Percent distribution, 2017	76
2.17a	Frequency of attendance at self-help programs among admissions aged 12 years and older, by primary substance use: Number, 2017.....	77
2.17b	Frequency of attendance at self-help programs among admissions aged 12 years and older, by primary substance use: Percent distribution, 2017	78
2.18	Admissions aged 12 years and older, by primary, secondary, and tertiary detailed drug: Number and percent distribution, 2017	79
3.1a	Admissions aged 12 to 14 years, by primary substance use: Number, 2007–2017.....	81
3.1b	Admissions aged 12 to 14 years, by primary substance use: Percent distribution, 2007–2017	82
3.2a	Admissions aged 15 to 17 years, by primary substance use: Number, 2007–2017.....	83
3.2b	Admissions aged 15 to 17 years, by primary substance use: Percent distribution, 2007–2017	84
3.3a	Gender and race/ethnicity among admissions aged 12 to 14 years, by primary substance use: Number, 2017	85
3.3b	Gender and race/ethnicity among admissions aged 12 to 14 years, by primary substance use: Percent distribution, 2017	86
3.4a	Gender and race/ethnicity among admissions aged 15 to 17 years, by primary substance use: Number, 2017	87
3.4b	Gender and race/ethnicity among admissions aged 15 to 17 years, by primary substance use: Percent distribution, 2017	88
3.5a	Age at admission and treatment referral source among admissions aged 12 to 17 years, by primary substance use: Number, 2017	89
3.5b	Age at admission and treatment referral source among admissions aged 12 to 17 years, by primary substance use: Percent distribution, 2017.....	90

LIST OF TABLES (CONTINUED)

3.6a	Admissions aged 12 to 14 years, by marijuana involvement and treatment referral source: Number, 2007–2017	91
3.6b	Admissions aged 12 to 14 years, by marijuana involvement and treatment referral source: Percent distribution, 2007–2017	92
3.7a	Admissions aged 15 to 17 years, by marijuana involvement and treatment referral source: Number, 2007–2017	93
3.7b	Admissions aged 15 to 17 years, by marijuana involvement and treatment referral source: Percent distribution, 2007–2017	94
3.8a	Heroin admissions aged 12 years and older, by age group and race/ethnicity: Number, 2007–2017	95
3.8b	Heroin admissions aged 12 years and older, by age group and race/ethnicity: Percent distribution, 2007–2017	97
3.9a	Heroin admissions aged 12 years and older, by usual route of administration, age group, and characteristics of treatment episode: Number, 2007–2017	99
3.9b	Heroin admissions aged 12 years and older, by usual route of administration, age group, and characteristics of treatment episode: Percent distribution, 2007–2017	101
3.10a	Heroin admissions aged 12 years and older with planned medication-assisted opioid therapy, by usual route of administration and age group: Number, 2007–2017	103
3.10b	Heroin admissions aged 12 years and older with planned medication-assisted opioid therapy, by usual route of administration and age group: Percent, 2007–2017	105
3.11	Primary substance use among admissions aged 12 years and older, by additional substance use: Number and percent distribution, 2017	106
3.12	Substance use combinations, by selected primary substance use: Number and percent distribution, 2017	108
4.1a	Primary substance use and age at admission among admissions aged 12 years and older, by type of treatment service: Number and average age at admission, 2017	110

LIST OF TABLES (CONTINUED)

4.1b	Primary substance use and age at admission among admissions aged 12 years and older, by type of treatment service: Column percent distribution and average age at admission, 2017.....	112
4.1c	Primary substance use and age at admission among admissions aged 12 years and older, by type of treatment service: Row percent distribution, 2017.....	114
4.2a	Gender and race/ethnicity among admissions aged 12 years and older, by type of treatment service: Number, 2017.....	116
4.2b	Gender and race/ethnicity among admissions aged 12 years and older, by type of treatment service: Column percent distribution, 2017.....	117
4.2c	Gender and race/ethnicity among admissions aged 12 years and older, by type of treatment service: Row percent distribution, 2017.....	118
4.3a	Treatment referral source, frequency of use, and number of prior treatment episodes among admissions aged 12 years and older, by type of treatment service: Number, 2017.....	119
4.3b	Treatment referral source, frequency of use, and number of prior treatment episodes among admissions aged 12 years and older, by type of treatment service: Column percent distribution, 2017.....	120
4.3c	Treatment referral source, frequency of use, and number of prior treatment episodes among admissions aged 12 years and older, by type of treatment service: Row percent distribution, 2017.....	121

National Substance Use Treatment Service Discharges

5.1	Discharges aged 12 years and older, by reason for discharge and type of treatment service: Number, percent distribution, and median length of stay (LOS), 2017.....	122
5.2a	Discharges aged 12 years and older, by type of treatment service and characteristics at admission: Number, 2017.....	123
5.2b	Discharges aged 12 years and older, by type of treatment service and characteristics at admission: Percent distribution, 2017.....	127
5.3a	Discharges aged 12 years and older, by type of treatment service and characteristics at discharge: Number, 2017.....	131
5.3b	Discharges aged 12 years and older, by type of treatment service and characteristics at discharge: Percent distribution, 2017.....	132

LIST OF TABLES (CONTINUED)

5.4a	Discharges aged 12 to 17 years, by type of treatment service and characteristics at admission: Number, 2017	133
5.4b	Discharges aged 12 to 17 years, by type of treatment service and characteristics at admission: Percent distribution, 2017	135
5.5a	Discharges aged 12 to 17 years, by type of treatment service and characteristics at discharge: Number, 2017	137
5.5b	Discharges aged 12 to 17 years, by type of treatment service and characteristics at discharge: Percent distribution, 2017	138
5.6a	Discharges aged 18 years and older, by type of treatment service and characteristics at admission: Number, 2017	139
5.6b	Discharges aged 18 years and older, by type of treatment service and characteristics at admission: Percent distribution, 2017	143
5.7a	Discharges aged 18 years and older, by type of treatment service and characteristics at discharge: Number, 2017	147
5.7b	Discharges aged 18 years and older, by type of treatment service and characteristics at discharge: Percent distribution, 2017	149
5.8a	Discharges aged 12 years and older that completed treatment, by type of treatment service and characteristics at admission: Number, 2017	151
5.8b	Proportions of discharges aged 12 years and older that completed treatment, by type of treatment service and characteristics at admission: 2017	155
5.9a	Discharges aged 12 years and older that completed treatment, by type of treatment service and characteristics at discharge: Number, 2017	159
5.9b	Proportions of discharges aged 12 years and older that completed treatment, by type of treatment service and characteristics at discharge: 2017	160
5.10a	Discharges aged 12 to 17 years that completed treatment, by type of treatment service and characteristics at admission: Number, 2017	161
5.10b	Proportions of discharges aged 12 to 17 years that completed treatment, by type of treatment service and characteristics at admission: 2017	163
5.11a	Discharges aged 12 to 17 years that completed treatment, by type of treatment service and characteristics at discharge: Number, 2017	165

LIST OF TABLES (CONTINUED)

5.11b	Proportions of discharges aged 12 to 17 years that completed treatment, by type of treatment service and characteristics at discharge: 2017	166
5.12a	Discharges aged 18 years and older that completed treatment, by type of treatment service and characteristics at admission: Number, 2017	167
5.12b	Proportions of discharges aged 18 years and older that completed treatment, by type of treatment service and characteristics at admission: 2017	171
5.13a	Discharges aged 18 years and older that completed treatment, by type of treatment service and characteristics at discharge: Number, 2017	175
5.13b	Proportions of discharges aged 18 years and older that completed treatment, by type of treatment service and characteristics at discharge: 2017	177
5.14a	Discharges aged 12 years and older that transferred to further treatment, by type of treatment service and characteristics at admission: Number, 2017	179
5.14b	Proportions of discharges aged 12 years and older that transferred to further treatment, by type of treatment service and characteristics at admission: 2017	183
5.15a	Discharges aged 12 years and older that transferred to further treatment, by type of treatment service and characteristics at discharge: Number, 2017	187
5.15b	Proportions of discharges aged 12 years and older that transferred to further treatment, by type of treatment service and characteristics at discharge: 2017	188
5.16a	Discharges aged 12 to 17 years that transferred to further treatment, by type of treatment service and characteristics at admission: Number, 2017	189
5.16b	Proportions of discharges aged 12 to 17 years that transferred to further treatment, by type of treatment service and characteristics at admission: 2017	191
5.17a	Discharges aged 12 to 17 years that transferred to further treatment, by type of treatment service and characteristics at discharge: Number, 2017	193
5.17b	Proportions of discharges aged 12 to 17 years that transferred to further treatment, by type of treatment service and characteristics at discharge: 2017	194
5.18a	Discharges aged 18 years and older that transferred to further treatment, by type of treatment service and characteristics at admission: Number, 2017	195
5.18b	Proportions of discharges aged 18 years and older that transferred to further treatment, by type of treatment service and characteristics at admission: 2017	199

LIST OF TABLES (CONTINUED)

5.19a	Discharges aged 18 years and older that transferred to further treatment, by type of treatment service and characteristics at discharge: Number, 2017	203
5.19b	Proportions of discharges aged 18 years and older that transferred to further treatment, by type of treatment service and characteristics at discharge: 2017	205
6.1	Outpatient treatment discharges aged 12 years and older, by reason for discharge and state or jurisdiction: Number and percent distribution, 2017	207
6.2a	Outpatient treatment discharges aged 12 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017	208
6.2b	Outpatient treatment discharges aged 12 years and older, by reason for discharge, median length of stay (LOS), and characteristics at admission: Column percent distribution, 2017	212
6.3a	Outpatient treatment discharges aged 12 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at discharge: Number and row percent distribution, 2017	216
6.3b	Outpatient treatment discharges aged 12 years and older, by reason for discharge, median length of stay (LOS), and characteristics at discharge: Column percent distribution, 2017	217
6.4a	Outpatient treatment discharges aged 12 to 17 years, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017	218
6.4b	Outpatient treatment discharges aged 12 to 17 years, by reason for discharge, median length of stay (LOS), and characteristics at admission: Column percent distribution, 2017	220
6.5a	Outpatient treatment discharges aged 12 to 17 years, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at discharge: Number and row percent distribution, 2017	222
6.5b	Outpatient treatment discharges aged 12 to 17 years, by reason for discharge, median length of stay (LOS), and characteristics at discharge: Column percent distribution, 2017	223

LIST OF TABLES (CONTINUED)

6.6a	Outpatient treatment discharges aged 18 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017	224
6.6b	Outpatient treatment discharges aged 18 years and older, by reason for discharge, median length of stay (LOS), and characteristics at admission: Column percent distribution, 2017	228
6.7a	Outpatient treatment discharges aged 18 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at discharge: Number and row percent distribution, 2017	232
6.7b	Outpatient treatment discharges aged 18 years and older, by reason for discharge, median length of stay (LOS), and characteristics at discharge: Column percent distribution, 2017	234
7.1	Intensive outpatient treatment discharges aged 12 years and older, by reason for discharge and state or jurisdiction: Number and percent distribution, 2017	236
7.2a	Intensive outpatient treatment discharges aged 12 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017	237
7.2b	Intensive outpatient treatment discharges aged 12 years and older, by reason for discharge, median length of stay (LOS), and characteristics at admission: Column percent distribution, 2017	241
7.3a	Intensive outpatient treatment discharges aged 12 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at discharge: Number and row percent distribution, 2017	245
7.3b	Intensive outpatient treatment discharges aged 12 years and older, by reason for discharge, median length of stay (LOS), and characteristics at discharge: Column percent distribution, 2017	246
7.4a	Intensive outpatient treatment discharges aged 12 to 17 years, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017	247

LIST OF TABLES (CONTINUED)

7.4b	Intensive outpatient treatment discharges aged 12 to 17 years, by reason for discharge, median length of stay (LOS), and characteristics at admission: Column percent distribution, 2017	249
7.5a	Intensive outpatient treatment discharges aged 12 to 17 years, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at discharge: Number and row percent distribution, 2017	251
7.5b	Intensive outpatient treatment discharges aged 12 to 17 years, by reason for discharge, median length of stay (LOS), and characteristics at discharge: Column percent distribution, 2017	252
7.6a	Intensive outpatient treatment discharges aged 18 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017	253
7.6b	Intensive outpatient treatment discharges aged 18 years and older, by reason for discharge, median length of stay (LOS), and characteristics at admission: Column percent distribution, 2017	257
7.7a	Intensive outpatient treatment discharges aged 18 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at discharge: Number and row percent distribution, 2017	261
7.7b	Intensive outpatient treatment discharges aged 18 years and older, by reason for discharge, median length of stay (LOS), and characteristics at discharge: Column percent distribution, 2017	263
8.1	Short-term residential treatment discharges aged 12 years and older, by reason for discharge and state or jurisdiction: Number and percent distribution, 2017	265
8.2a	Short-term residential treatment discharges aged 12 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017	266
8.2b	Short-term residential treatment discharges aged 12 years and older, by reason for discharge, median length of stay (LOS), and characteristics at admission: Column percent distribution, 2017	270

LIST OF TABLES (CONTINUED)

8.3a	Short-term residential treatment discharges aged 12 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at discharge: Number and row percent distribution, 2017	274
8.3b	Short-term residential treatment discharges aged 12 years and older, by reason for discharge, median length of stay (LOS), and characteristics at discharge: Column percent distribution, 2017	275
8.4a	Short-term residential treatment discharges aged 12 to 17 years, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017	276
8.4b	Short-term residential treatment discharges aged 12 to 17 years, by reason for discharge, median length of stay (LOS), and characteristics at admission: Column percent distribution, 2017	278
8.5a	Short-term residential treatment discharges aged 12 to 17 years, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at discharge: Number and row percent distribution, 2017	280
8.5b	Short-term residential treatment discharges aged 12 to 17 years, by reason for discharge, median length of stay (LOS), and characteristics at discharge: Column percent distribution, 2017	281
8.6a	Short-term residential treatment discharges aged 18 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017	282
8.6b	Short-term residential treatment discharges aged 18 years and older, by reason for discharge, median length of stay (LOS), and characteristics at admission: Column percent distribution, 2017	286
8.7a	Short-term residential treatment discharges aged 18 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at discharge: Number and row percent distribution, 2017	290
8.7b	Short-term residential treatment discharges aged 18 years and older, by reason for discharge, median length of stay (LOS), and characteristics at discharge: Column percent distribution, 2017	292

LIST OF TABLES (CONTINUED)

9.1	Long-term residential treatment discharges aged 12 years and older, by reason for discharge and state or jurisdiction: Number and percent distribution, 2017	294
9.2a	Long-term residential treatment discharges aged 12 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017	295
9.2b	Long-term residential treatment discharges aged 12 years and older, by reason for discharge, median length of stay (LOS), and characteristics at admission: Column percent distribution, 2017	299
9.3a	Long-term residential treatment discharges aged 12 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at discharge: Number and row percent distribution, 2017	303
9.3b	Long-term residential treatment discharges aged 12 years and older, by reason for discharge, median length of stay (LOS), and characteristics at discharge: Column percent distribution, 2017	304

INTRODUCTION

This report presents national- and state-level data from the Treatment Episode Data Set (TEDS) for admissions and discharges occurring in 2017, and trend data from 2007 to 2017. It summarizes demographic information and the characteristics and outcomes of treatment for alcohol and/or drug use among clients aged 12 years and older in facilities that report to individual state administrative data systems. Data include records for treatment admissions and discharges that were received and processed through November 21, 2018.¹

TEDS records do not represent individuals; rather, each record represents a treatment episode. Thus, an individual admitted to treatment twice within a calendar year is counted as two admissions. Similarly, discharges during the year, regardless of when the admission occurred, are counted.

TEDS does not include all substance use treatments. It includes treatment admissions and discharges at facilities that are licensed or certified by a state substance abuse agency to provide care for people with a substance use disorder (or facilities that are administratively tracked for other reasons). In general, facilities reporting TEDS data are those that receive state alcohol and/or drug agency funds (including federal block grant funds) for the provision of alcohol and/or drug treatment services. Additional information on the history and methodology of TEDS and this report, as well as important issues related to state data collection systems, are available in Appendix A.

It is important to note that percentages in charts, narrative lists, and tables may not add to 100 percent due to rounding; figures in the narrative are expressed using the nearest whole number.

¹ For researchers interested in more detailed analysis, TEDS public use files are available for download from the Substance Abuse and Mental Health Data Archive, which can be accessed at <https://datafiles.samhsa.gov>. Summary data for individual states that have submitted the full year of data are available online through the Quick Statistics website at <https://www.dasis.samhsa.gov/webt/newmapv1.htm>.

HIGHLIGHTS

In 2017, a total of 2,005,395 admissions aged 12 years and older were reported to TEDS by 48 states, the District of Columbia, and Puerto Rico. Georgia and Oregon did not report sufficient admissions for 2017 to be included in this report [Table 14.1a]. In prior years, admissions for the following states have also been excluded: Alabama (2007); the District of Columbia and Mississippi (2009); South Carolina (2014); Oregon and South Carolina (2015); and Georgia and Oregon (2016).

In 2017, a total of 1,801,822 discharge records were reported to TEDS by 47 states, the District of Columbia, and Puerto Rico, of which 92 percent (or 1,661,207 records) can be linked to TEDS admissions aged 12 years and older between 2000 and 2017. Georgia, Oregon, and West Virginia did not report sufficient discharge data for 2017 to be included in this report [Tables 18.1a–b].

Primary Substance Use at Admission

- The most frequently reported primary substances in 2017 were: opiates (34 percent), alcohol (29 percent), marijuana/hashish (13 percent), stimulants (12 percent), and cocaine (5 percent), accounting for 93 percent of all admissions aged 12 years and older [Table 1.1b].

Alcohol

- The proportion of admissions with alcohol use reported as the primary substance ranged between 39 and 40 percent from 2007 through 2010, before declining to 29 percent in 2017 [Table 1.1b].
- The average age at admission among alcohol-only admissions was 43 years, whereas the average age among admissions for primary use of alcohol with secondary drug use was 39 years [Table 2.1b].
- Almost two thirds (63 percent) of alcohol-only admissions aged 12 years or older were non-Hispanic Whites, 14 percent were of Hispanic origin, and 14 percent were non-Hispanic Blacks. Among admissions for primary alcohol with secondary drug use, 56 percent were non-Hispanic Whites, 22 percent were non-Hispanic Blacks, and 14 percent were of Hispanic origin [Table 2.2b].

Heroin

- In 2007, 14 percent of admissions aged 12 years or older were for primary heroin use. In 2017, 27 percent of admissions aged 12 years or older were for primary heroin use [Table 1.1b].
- For primary heroin admissions, the average age at admission was 36 years [Table 2.1b].
- Non-Hispanic Whites accounted for 66 percent of primary heroin admissions aged 12 years and older in 2017; non-Hispanic Blacks accounted for 14 percent, and Hispanics accounted for 13 percent [Table 2.2b].

Opiates Other Than Heroin²

- The proportion of admissions aged 12 years or older for primary use of opiates other than heroin increased from 5 percent in 2007 to 10 percent in 2011 and 2012, before declining to 7 percent in 2017 [Table 1.1b].
- The average age at admission was 35 years among admissions for primary use of non-heroin opiates [Table 2.1b].
- Non-Hispanic Whites accounted for 79 percent of primary non-heroin opiate admissions aged 12 years or older [Table 2.2b].

Marijuana/Hashish

- The proportion of marijuana/hashish admissions aged 12 years or older increased from 16 percent in 2007 to 19 percent in 2010, before declining to 13 percent in 2017 [Table 1.1b].
- The average age at admission was 27 years among admissions for primary use of marijuana/hashish [Table 2.1b].
- Non-Hispanic Whites represented 42 percent of primary marijuana/hashish admissions aged 12 years or older; 31 percent were non-Hispanic Blacks, and 20 percent were of Hispanic origin [Table 2.2b].

Cocaine/Crack

- The proportion of admissions aged 12 years or older for primary use of cocaine declined from 13 percent in 2007 to 6 percent in 2013, and remained at 5 percent from 2014 to 2017 [Table 1.1b].
- The average age at admission among primary smoked cocaine admissions was 44 years; among primary non-smoked cocaine admissions, the average age was 37 years [Table 2.1b].
- Non-Hispanic Blacks represented 51 percent of primary smoked cocaine admissions aged 12 years or older; 35 percent were non-Hispanic Whites, and 8 percent were of Hispanic origin. Among primary non-smoked cocaine admissions aged 12 years and older, 47 percent were non-Hispanic Whites, 30 percent were non-Hispanic Blacks, and 17 percent were of Hispanic origin [Table 2.2b].

Methamphetamine/Amphetamines

- The proportion of admissions for primary methamphetamine/amphetamines aged 12 years and older ranged between 8 and 12 percent from 2007 to 2017 [Table 1.1b].
- The average age at admission was 34 years for primary methamphetamine/amphetamine admissions [Table 2.1b].
- Non-Hispanic Whites represented 64 percent of primary methamphetamine/amphetamine admissions aged 12 years and older; admissions of Hispanic origin accounted for 20 percent, and 6 percent were non-Hispanic Blacks [Table 2.2b].

² These drugs include non-prescription methadone, buprenorphine, codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects.

Trends in Substance Use Treatment Admissions

- In each year between 2007 and 2017, the Middle Atlantic and Pacific divisions had the largest number of admissions among all Census divisions, with 388,288 and 403,316 admissions, respectively, in 2017. The lowest number of admissions was reported in the East South Central division, with 58,659 admissions in 2017 [Table 14.1a].
- The ratio of admissions per 100,000 population aged 12 years and older in 2017 was highest in the New England and Middle Atlantic divisions—1,449 and 1,082 per 100,000 population aged 12 years and older, respectively [Table 14.1b].

Type of Treatment Service at Discharge

Of the 1,661,207 discharges aged 12 years and older in 2017 [Table 18.2b]:

- 39 percent were discharged from outpatient treatment,
- 18 percent were discharged from detoxification, and
- 13 percent were discharged from intensive outpatient treatment.

Reason for Discharge

Of the 1,661,207 discharges aged 12 years and older in 2017 [Table 19.3b]:

- 41 percent of the discharges completed treatment,
- 26 percent of the discharges dropped out of treatment, and
- 22 percent of the discharges were transferred to further treatment.

Treatment Completion by Type of Treatment Service

The treatment completion rate was 41 percent among discharges aged 12 years and older from all treatment service types combined. For the individual service types, treatment was completed by [Table 5.1]:

- 66 percent of discharges from hospital residential treatment,
- 64 percent of discharges from detoxification,
- 53 percent of discharges from short-term residential treatment,
- 44 percent of discharges from medication-assisted opioid detoxification, and
- 13 percent of discharges from outpatient medication-assisted opioid therapy.

Median Length of Stay (LOS)

The median LOS in treatment among discharges aged 12 years and older, by type of treatment service, was [Table 5.1]:

- 90 days for discharges from outpatient medication-assisted opioid therapy,

- 78 days for discharges from non-intensive outpatient treatment,
- 42 days for discharges from intensive outpatient treatment,
- 39 days for discharges from long-term residential treatment, and
- 5 days for discharges from medication-assisted opioid detoxification.

Treatment Admissions per 100,000 Population, by State or Jurisdiction

- In 2017, the ratio of treatment admissions per 100,000 population was higher for primary opiates than for primary use of alcohol. The admission ratio for primary opiates was 256 per 100,000 population aged 12 years and older, compared with 221 per 100,000 population for primary alcohol use [Table 15.2b].
- Heroin and alcohol were the most frequently reported primary substances used among admissions in most Census divisions. Across all Census divisions in 2017, the ratio for primary marijuana use admissions was 94 per 100,000 population aged 12 years and older; the ratio for methamphetamine/amphetamines admissions was 89 per 100,000 population aged 12 years and older [Table 15.2b].
- In 28 of the 50 reporting states and jurisdictions, the ratio of admissions per 100,000 population aged 12 years and older was higher for primary alcohol use than for primary opiate use. The following states had an admission ratio for primary use of a non-opiate substance which was greater than that for primary alcohol use: Alabama (marijuana); Arkansas, California, Hawaii, Idaho, Kansas, North Dakota, Oklahoma, and Utah (methamphetamine/amphetamines); and Delaware, Louisiana, Nevada, and Washington (other/none specified) [Table 15.2b].

Reason for Discharge and Treatment Completion by State or Jurisdiction

- In 24 of 49 states and jurisdictions, treatment completion rates were less than 41 percent [Table 19.3b].
- Among discharges that completed treatment, the median length of stay in long-term residential treatment was 78 days; among discharges that completed intensive outpatient treatment, the median length of stay was 82 days. In 11 states, clients stayed in long-term residential treatment for a median of four months or longer (ranging between 132 and 403 days) [Table 20.1].
- The median length of stay for discharges that completed outpatient medication-assisted opioid therapy was 174 days; in eight states, clients stayed in treatment for a median of nine months or longer (ranging between 292 and 739 days). [Table 20.1].

CHAPTER 1.

CHARACTERISTICS OF ADMISSIONS: 2017

All Admissions Aged 12 Years and Older

The tables associated with this chapter present data on the characteristics of all admissions in 2017 aged 12 years and older, by primary substance use.

- Opiates were the most frequently reported primary substances in 2017, accounting for 34 percent of all admissions aged 12 years and older. About 80 percent of opiate-related admissions were for primary heroin use [Table 1.1b].
- In 2017, 73 percent of admissions aged 15 to 17 years were for primary marijuana use [Table 3.2b].
- The average age for all admissions was 36 years; 7 percent of admissions were aged 12 to 20 years [Tables 2.1a–b].
- Non-Hispanic Whites represented 61 percent of all admissions aged 12 years and older (37 percent were male and 23 percent were female). Non-Hispanic Blacks represented 17 percent of all admissions (12 percent were male and 5 percent female) [Table 2.3b].
- Of all admissions, 36 percent reported no prior treatment episodes, 23 percent had one prior treatment episode, and 15 percent had five or more previous treatment episodes [Table 2.7b].
- The two largest sources of referrals to treatment were self- or individual referrals (43 percent) and the courts/criminal justice system (28 percent) [Table 2.8b].
- Most admissions (62 percent) received ambulatory treatment, 20 percent received detoxification (free-standing residential or hospital inpatient) treatment, and 18 percent received rehabilitation/residential treatment [Table 2.9b].

CHAPTER 2. TYPE OF TREATMENT SERVICES: 2017

TEDS records the type of service to which clients are admitted for treatment. The major categories are broadly defined as ambulatory, rehabilitation/residential, and detoxification. In this report, admissions for which medication-assisted opioid therapy (i.e., therapy using methadone, buprenorphine, and/or naltrexone) was planned have been categorized as a separate type of treatment service.

Table 4.1c shows the type of treatment service received by primary substance used.

- Ambulatory treatment services accounted for 49 percent of all admissions (37 percent in outpatient treatment and 12 percent in intensive outpatient treatment). Admissions for marijuana/hashish (86 percent), methamphetamines/amphetamines (58 percent), sedatives (55 percent), cocaine (55 percent), and alcohol (53 percent) received ambulatory treatment services in greater proportion than all admissions combined.
- Detoxification services accounted for 20 percent of all admissions (15 percent in free-standing residential treatment, 4 percent in hospital inpatient treatment, and less than 1 percent in ambulatory treatment). Among admissions for tranquilizers, 31 percent received detoxification, whereas 3 percent of marijuana admissions received detoxification.
- Rehabilitation/residential treatment accounted for 16 percent of all admissions (9 percent in short-term treatment, 8 percent in long-term treatment, and less than 1 percent in hospital inpatient treatment). A greater proportion of admissions for methamphetamine/amphetamines, cocaine, tranquilizers, and alcohol (29, 28, 20, and 17 percent, respectively) received rehabilitation/residential treatment services than among all admissions combined (16 percent).
- Planned medication-assisted opioid therapy accounted for about 15 percent of all admissions (12 percent in outpatient treatment, 1 percent in detoxification treatment, and 1 percent in residential treatment). Medication-assisted opioid therapy was planned for 39 percent of primary opiate admissions.

CHAPTER 3.

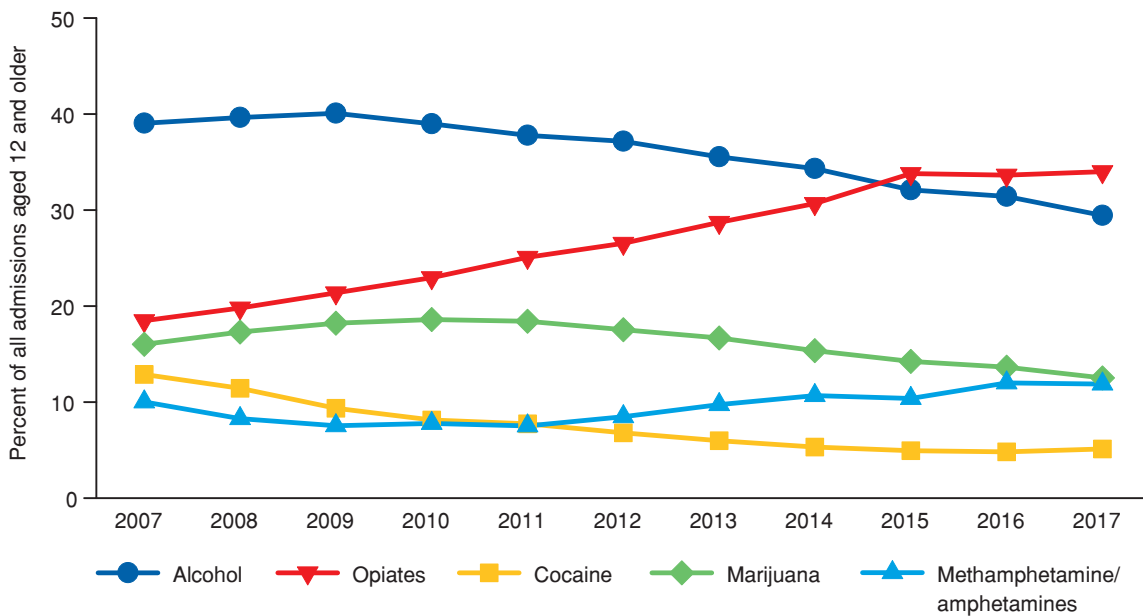

TRENDS IN SUBSTANCE USE TREATMENT ADMISSIONS AGED 12 YEARS AND OLDER: 2007–2017

This chapter details trends in the annual numbers and rates of admissions aged 12 years and older between 2007 and 2017. Trend data are valuable for monitoring changing patterns in substance use treatment admissions.

Trends in Primary Substance Use: 2007–2017

Tables 1.1a–b and Figure 1. The number of all admissions aged 12 years and older decreased from 2,162,877 in 2007 to 2,005,395 in 2017. Between 2007 and 2017, five substance groups accounted for between 93 and 97 percent of the primary substances reported among treatment admissions aged 12 years and older: alcohol, opiates, marijuana/hashish, cocaine, and methamphetamine/amphetamines. However, the proportions of admissions by primary substance used changed considerably during the period for most substances.

Figure 1. Primary substance use at admission: 2007–2017

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

Trends in Co-occurring Alcohol and Drug Use

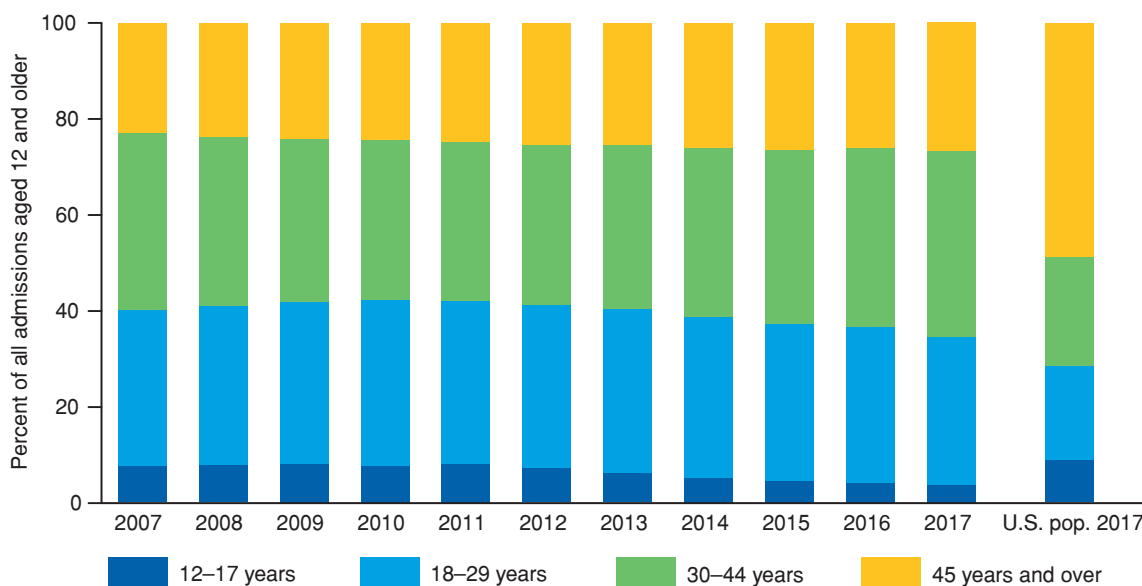

Table 1.2. The co-occurring use of alcohol and drugs continues to be a significant problem. Because TEDS collects a maximum of three substances used, rather than all substances used, alcohol use among polydrug users may be underreported.

Trends in Demographic Characteristics

Table 1.3b and Figure 2. Males represented 67 percent of admissions aged 12 years and older in 2007 and 64 percent in 2017. In 2017, 49 percent of the U.S. population aged 12 years and older was male.

- The proportion of admissions aged 12 to 20 years decreased from 14 percent in 2007 to 7 percent in 2017.
- The proportion of admissions aged 25 to 34 years increased from 26 percent in 2007 to 35 percent in 2017.
- The proportion of admissions aged 50 years and older increased from 11 percent in 2007 to 18 percent in 2017

Figure 2. Age at admission: TEDS 2007–2017 and U.S. population 2017

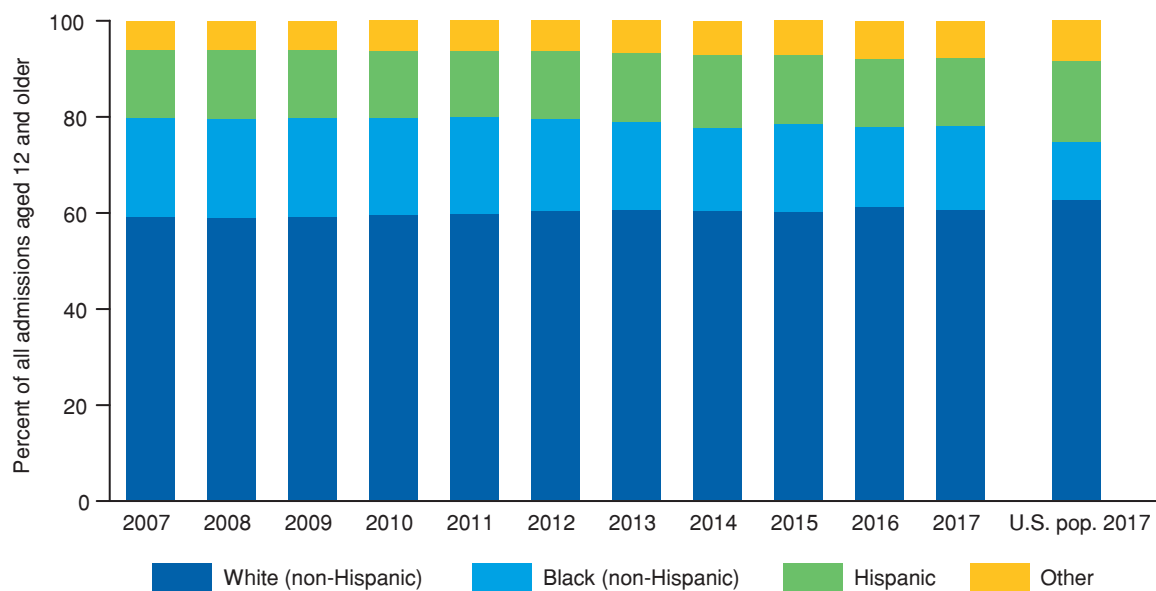

SOURCES: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18. Population: U.S. Census Bureau, NC-EST2017-ALLDATA: Monthly Population Estimates by Age, Sex, Race, and Hispanic Origin for the United States: April 1, 2010 to July 1, 2017.

Table 1.4 and Figure 3. The racial/ethnic composition of admissions aged 12 years and older between 2007 and 2017 was as follows:

- Non-Hispanic Whites increased from 59 percent of admissions in 2007 to 61 percent of admissions in 2017.
- Non-Hispanic Blacks declined from 21 percent of admissions in 2007 to 17 percent of admissions in 2017.
- Admissions of Hispanic origin comprised between 14 and 15 percent of all admissions in each year between 2007 and 2017.

Figure 3. Race/ethnicity of admissions: TEDS 2007–2017 and U.S. population 2017

SOURCES: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18. Population: U.S. Census Bureau, NC-EST2017-ALLDATA: Monthly Population Estimates by Age, Sex, Race, and Hispanic Origin for the United States: April 1, 2010 to July 1, 2017.

Trends in Employment Status

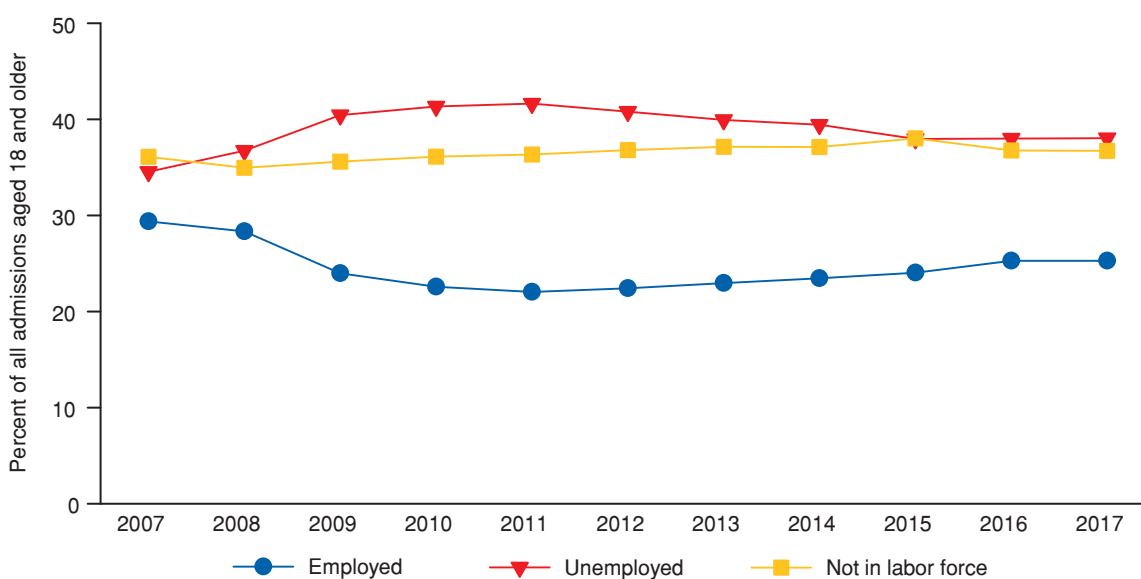

Tables 1.5a–b and Figure 4. Between 2007 and 2017, the proportion of admissions aged 18 years and older that were employed ranged between 22 and 29 percent; 62 percent of the U.S. population aged 18 years and older was employed in 2017.

- Between 2007 and 2017, the proportion of admissions aged 18 years and older that were unemployed ranged between 35 and 42 percent.
- Between 2007 and 2017, the proportion of admissions aged 18 years and older that were not in the labor force ranged between 35 and 38 percent.

The adjusted distribution of TEDS admissions by age, race/ethnicity, and gender is shown in Tables 1.5a–b.³

- In 2017, the adjusted proportion of TEDS admissions aged 18 years and older that were unemployed was 31 percent, whereas 3 percent of the U.S. population aged 18 years and older was unemployed.
- In 2017, the adjusted proportion of TEDS admissions not in the labor force was 48 percent, whereas 36 percent of the U.S. population aged 18 years and older was not in the labor force.

Figure 4. Employment status among admissions aged 18 years and older: 2007–2017

SOURCES: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18. Employment: Bureau of Labor Statistics, Labor force Statistics from the Current Population Survey, retrieved January 28, 2019 from <https://www.bls.gov/cps/aa2017/cpsaat08.htm>. Not in labor force: Bureau of Labor Statistics, retrieved January 28, 2019 from <https://www.bls.gov/cps/aa2017/cpsaat03.htm>. U.S. Census Bureau, NC-EST2017-ALLDATA: Monthly Population Estimates by Age, Sex, Race, and Hispanic Origin for the United States: April 1, 2010 to July 1, 2017.

³ The figures presented in Tables 1.5a–b represent the employment status of TEDS admissions for each year, if the population of TEDS admissions were scaled to the size and composition (gender, age group, and race/ethnicity) of the 2017 U.S. resident population.

CHAPTER 4.

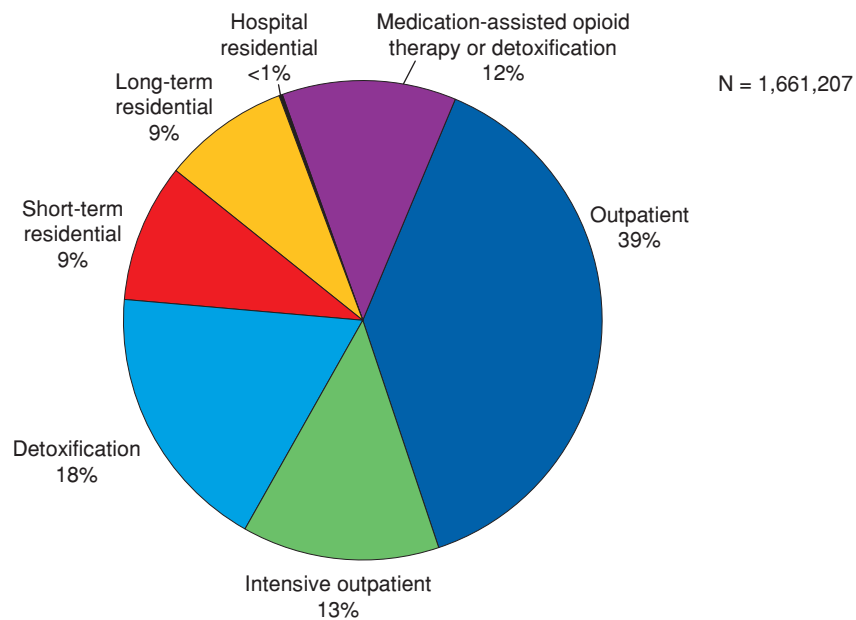

DISCHARGE DATA OVERVIEW FOR ALL TYPES OF TREATMENT SERVICES: 2017

Type of Treatment Service

Tables 18.2a–b present the type of treatment service at discharge, by state, for 2017 discharges. There was considerable state-to-state variability in the combination of types of treatment services available and in the proportions discharged from each.

Figure 5 illustrates the distribution of 2017 discharges among various types of treatment services. The majority were discharged from a type of outpatient treatment service—39 percent from outpatient treatment and 13 percent from intensive outpatient treatment. In addition, 18 percent were discharged from detoxification, 9 percent from short-term residential treatment, 9 percent from long-term residential treatment, 12 percent from medication-assisted opioid therapy or detoxification, and less than 1 percent from hospital residential treatment.

Figure 5. Type of treatment service at discharge: 2017

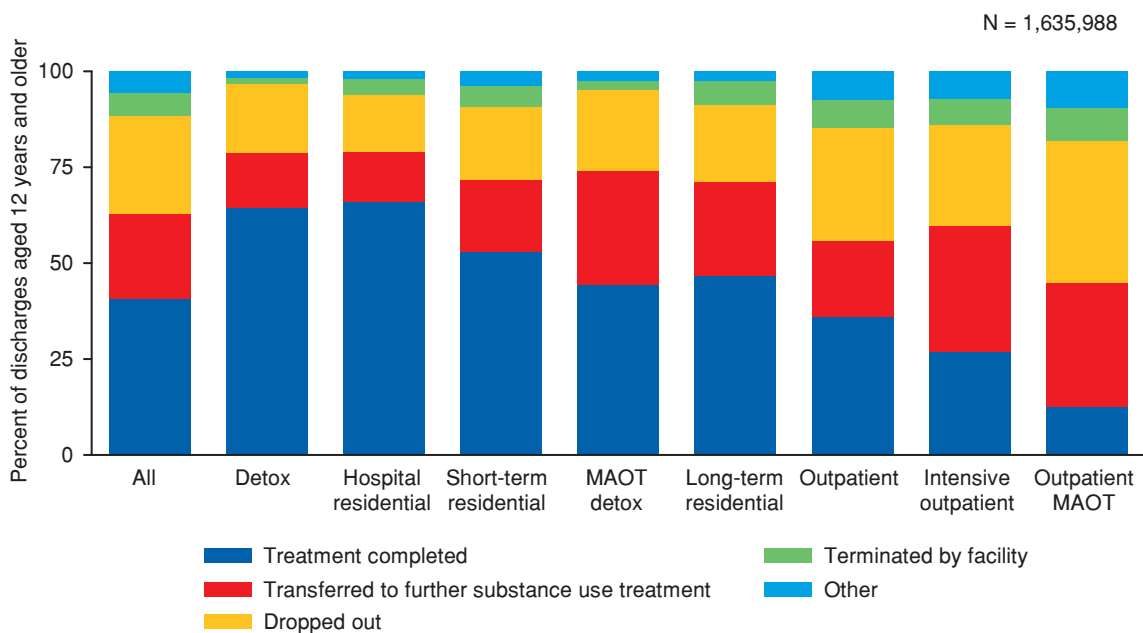

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

Reason for Discharge by Type of Treatment Service

Table 5.1 and Figure 6 present the reason for discharge by type of treatment service. Note that in Table 5.1 and Figure 6, the other category includes data for death and incarceration; in Tables 19.3a through 19.5b, death and incarceration are shown separately.

- Among all discharges in 2017, 41 percent completed treatment. Another 22 percent were transferred to further substance use treatment.
- By type of treatment service, completion was reported in greatest proportion among discharges from hospital residential treatment (66 percent) and detoxification (64 percent).
- Treatment dropout was reported in greatest proportion among discharges from outpatient medication-assisted opioid therapy (37 percent) and outpatient treatment (30 percent).

Figure 6. Reason for discharge, by type of treatment service: 2017

MAOT = Medication-assisted opioid therapy.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

Median Length of Stay (LOS) by Type of Treatment Service and Reason for Discharge

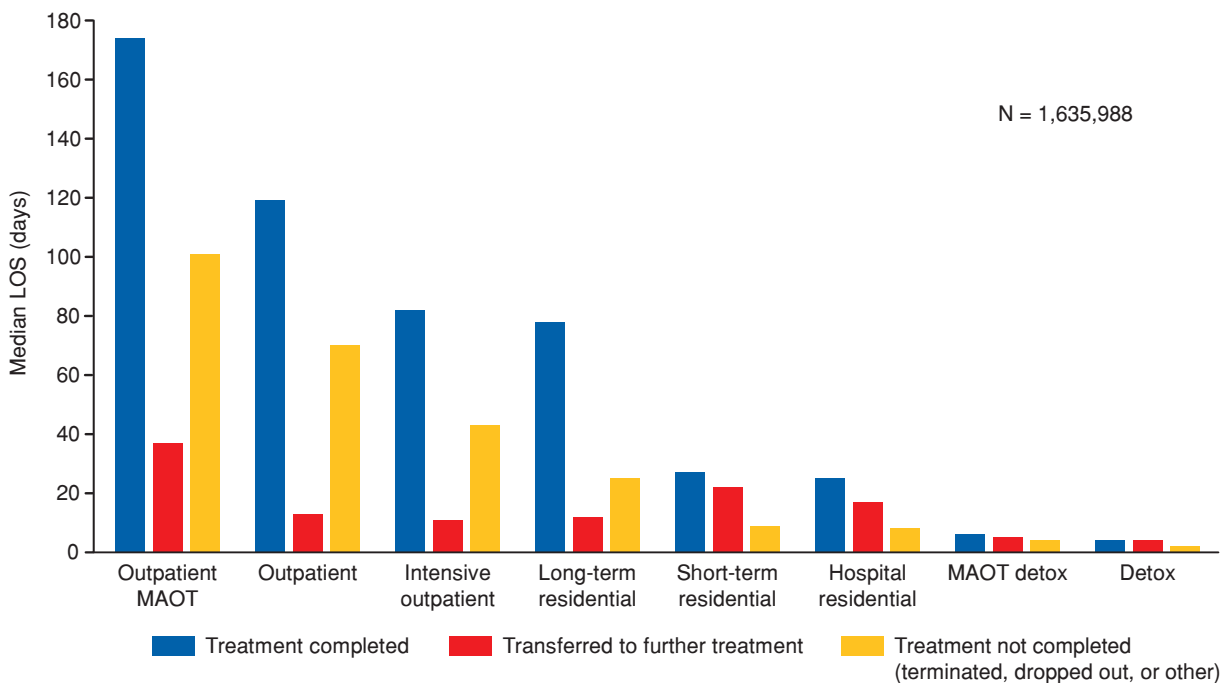

Table 5.1.

- The median length of stay (LOS) was longest for discharges from outpatient medication-assisted opioid therapy (90 days) and outpatient treatment (78 days).
- The median LOS was shortest for discharges from detoxification (four days) and medication-assisted opioid detoxification (five days).

Figure 7.

- The median LOS for discharges that completed treatment was longer than or equal to those that did not complete treatment, across all types of treatment service.
- The median LOS among discharges that completed treatment was 174 days for outpatient medication-assisted opioid therapy, 119 days for outpatient treatment, 82 days for intensive outpatient treatment, 78 days for long-term residential treatment, 27 days for hospital residential treatment, 25 days for short-term residential treatment, six days for medication-assisted opioid detoxification, and four days for detoxification.

Figure 7. Median length of stay (LOS), by reason for discharge and type of treatment service: 2017

MAOT = Medication-assisted opioid therapy.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

Socio-Demographic and Substance Use Characteristics at Time of Admission

Tables 5.2a–b, 5.4a–b, and 5.6a–b summarize the number and percent distribution of characteristics at admission, by type of treatment service, for all discharges. Summary findings of the admission characteristics of all discharges combined include the following:

- Males accounted for 65 percent of all discharges [Table 5.2b].
- Of all discharges, 7 percent were aged 12 to 20 years at the time of admission, 18 percent were 25 to 29 years of age, and 17 percent were aged 50 years or older [Table 5.2b].
- Non-Hispanic Whites accounted for 62 percent of all discharges [Table 5.2b].
- Prior to the current episode, 63 percent of all discharges had at least one prior treatment episode [Table 5.2b].
- Self- or individual referrals accounted for 43 percent of all discharges; 29 percent were referred to treatment through a criminal justice/DUI source [Table 5.2b].
- Of discharges aged 18 years and older, 75 percent reported completing 12 or more years of education or a GED [Table 5.6b].

Treatment Completion

Tables 5.8a–b through 5.13a–b. Some general observations can be made about the characteristics at admission of episodes that resulted in treatment completion:

- Of discharges aged 18 years and older, the treatment completion rate was 37 percent among those with between 9 and 11 years of education; among those with 16 years of education or a bachelor's degree, the treatment completion rate was 50 percent [Table 5.12b].
- The treatment completion rate among discharges aged 12 to 17 years, by primary substance use at admission, was highest for alcohol (45 percent); the next highest completion rates were for cocaine (41 percent) and marijuana (28 percent). [Table 5.10b]. The treatment completion rates among discharges aged 18 years and older, by primary substance use at admission, were highest for alcohol (53 percent) and stimulants (38 percent) [Table 5.12b].
- The treatment completion rate was higher among discharges aged 18 years and older that reported being employed full-time at admission (48 percent) than among those that reported being unemployed or not in the labor force at admission (36 and 43 percent, respectively) [Table 5.12b].
- The treatment completion rate was 45 percent among Hispanics and 40 percent among both non-Hispanic Whites and non-Hispanic Blacks [Table 5.8b].

CHAPTER 5.

TREATMENT ADMISSIONS AGED 12 YEARS AND OLDER, BY STATE OR JURISDICTION, PRIMARY SUBSTANCE USE, AND SELECTED CHARACTERISTICS: 2017

The tables associated with this chapter present data on substance use treatment admissions aged 12 years and older in 2017 by state or jurisdiction, primary substance use, and selected demographic characteristics.

As noted previously, comparisons among states and jurisdictions should be made with caution. Many factors affect comparability (e.g., facilities included, clients included, ability to track multi-service episodes, services offered, and completeness and timeliness of reporting). See Appendix A for a full discussion.

Tables 16.1a–16.50a present, for each state or jurisdiction reporting admissions to TEDS for 2017, the number of admissions aged 12 years and older, by demographic characteristics (gender, age group, and race/ethnicity) and by primary substance.

Tables 16.1b–16.50b present, for each state or jurisdiction reporting admissions to TEDS for 2017, the percentage distribution of admissions aged 12 years and older, by demographic characteristics (gender, age group, and race/ethnicity) and by primary substance.

CHAPTER 6.

TREATMENT DISCHARGES AGED 12 YEARS AND OLDER, BY REASON FOR DISCHARGE AND BY STATE OR JURISDICTION: 2017

The tables associated with this chapter present data on substance use treatment discharges in 2017 for admissions aged 12 years and older, by reason for discharge and by state or jurisdiction.

Tables 6.1–13.1 present, for each state or jurisdiction reporting discharges in 2017, the reason for discharge from outpatient treatment [Table 6.1], intensive outpatient treatment [Table 7.1], short-term residential treatment [Table 8.1], long-term residential treatment [Table 9.1], hospital residential treatment [Table 10.1], detoxification [Table 11.1], outpatient medication-assisted opioid therapy [Table 12.1], and medication-assisted opioid detoxification [Table 13.1].

Tables 18.1a–b through 25.2 present discharge information by state or jurisdiction.

¹ Excludes 25,219 residential (short-term, long-term, hospital) discharges where medication-assisted opioid therapy was planned.

² Includes only free-standing residential detoxification, hospital detoxification, and outpatient detoxification.

³ Outpatient and intensive outpatient medication-assisted opioid therapy was planned.

⁴ Medication-assisted opioid detoxification (free-standing, hospital, and outpatient) was planned.

NOTES: Based on linked admission and discharge data reported to TEDS by 49 states and jurisdictions. Percentages may not add to 100 percent due to rounding. Percentages are based on all admissions with known and valid values. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator). The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

- - Quantity is zero.

¹ Excludes 25,219 residential (short-term, long-term, hospital) discharges where medication-assisted opioid therapy was planned.

² Outpatient and intensive outpatient medication-assisted opioid therapy was planned.

³ Medication-assisted opioid detoxification (free-standing, hospital, and outpatient) was planned.

⁴ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported to TEDS by 49 states and jurisdictions. Some data items in this table are Supplemental Data Set items, which are reported at each state's option.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

-- Quantity is zero.

¹ Excludes 25,219 residential (short-term, long-term, hospital) discharges where medication-assisted opioid therapy was planned.

² Outpatient and intensive outpatient medication-assisted opioid therapy was planned.

³ Medication-assisted opioid detoxification (free-standing, hospital, and outpatient) was planned.

⁴ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported to TEDS by 49 states and jurisdictions. Some data items in this table are Supplemental Data Set items, which are reported at each state's option.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

- - Quantity is zero.

¹ Excludes 25,219 residential (short-term, long-term, hospital) discharges where medication-assisted opioid therapy was planned.

² Outpatient and intensive outpatient medication-assisted opioid therapy was planned.

³ Medication-assisted opioid detoxification (free-standing, hospital, and outpatient) was planned.

⁴ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Percentages of discharges that completed treatment are calculated as a proportion of all treatment discharges (not taking into account the reason for discharge) within the admission characteristic and type of treatment service referenced. Based on linked admission and discharge data reported to TEDS by 49 states and jurisdictions. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

-- Quantity is zero.

¹ Excludes 25,219 residential (short-term, long-term, hospital) discharges where medication-assisted opioid therapy was planned.

² Outpatient and intensive outpatient medication-assisted opioid therapy was planned.

³ Medication-assisted opioid detoxification (free-standing, hospital, and outpatient) was planned.

NOTES: Percentages of discharges that completed treatment are calculated as a proportion of all treatment discharges (not taking into account the reason for discharge) within the admission characteristic and type of treatment service referenced. Based on linked admission and discharge data reported to TEDS by 49 states and jurisdictions. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

¹ Excludes 25,219 residential (short-term, long-term, hospital) discharges where medication-assisted opioid therapy was planned.

² Outpatient and intensive outpatient medication-assisted opioid therapy was planned.

³ Medication-assisted opioid detoxification (free-standing, hospital, and outpatient) was planned.

⁴ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Percentages of discharges that completed treatment are calculated as a proportion of all treatment discharges (not taking into account the reason for discharge) within the discharge characteristic and type of treatment service referenced. Based on linked admission and discharge data reported to TEDS by 49 states and jurisdictions. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

-- Quantity is zero.

¹ Excludes 25,219 residential (short-term, long-term, hospital) discharges where medication-assisted opioid therapy was planned.

² Outpatient and intensive outpatient medication-assisted opioid therapy was planned.

³ Medication-assisted opioid detoxification (free-standing, hospital, and outpatient) was planned.

⁴ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Percentages of discharges that transferred to further treatment are calculated as a proportion of all treatment discharges (not taking into account the reason for discharge) within the admission characteristic and type of treatment service referenced. Based on linked admission and discharge data reported to TEDS by 49 states and jurisdictions. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

¹ Excludes 25,219 residential (short-term, long-term, hospital) discharges where medication-assisted opioid therapy was planned.

² Outpatient and intensive outpatient medication-assisted opioid therapy was planned.

³ Medication-assisted opioid detoxification (free-standing, hospital, and outpatient) was planned.

⁴ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Percentages of discharges that transferred to further treatment are calculated as a proportion of all treatment discharges (not taking into account the reason for discharge) within the admission characteristic and type of treatment service referenced. Based on linked admission and discharge data reported to TEDS by 49 states and jurisdictions. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

-- Quantity is zero.

¹ Excludes 25,219 residential (short-term, long-term, hospital) discharges where medication-assisted opioid therapy was planned.

² Outpatient and intensive outpatient medication-assisted opioid therapy was planned.

³ Medication-assisted opioid detoxification (free-standing, hospital, and outpatient) was planned.

⁴ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported to TEDS by 49 states and jurisdictions. Some data items in this table are Supplemental Data Set items, which are reported at each state's option.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

NOTES: Based on linked admission and discharge data reported to TEDS by the 49 states and jurisdictions that offered outpatient substance use treatment and reported these data to TEDS. Comparisons among states should be made with caution. Percentages may not add to 100 percent due to rounding. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Admissions for which values were not collected or missing are excluded from the percentage base (denominator).

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

¹ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported by the 49 states and jurisdictions that offered outpatient substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

¹ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported by the 49 states and jurisdictions that offered outpatient substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

NOTES: Based on linked admission and discharge data reported by the 49 states and jurisdictions that offered outpatient substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

¹ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported by the 49 states and jurisdictions that offered outpatient substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

¹ Only discharges aged 18 years and older are included for employment status and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported by the 49 states and jurisdictions that offered outpatient substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

¹ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported by the 47 states and jurisdictions that offered intensive outpatient substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

¹ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported by the 47 states and jurisdictions that offered intensive outpatient substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

NOTES: Based on linked admission and discharge data reported by the 47 states and jurisdictions that offered intensive outpatient substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

¹ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported by the 47 states and jurisdictions that offered intensive outpatient substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

¹ Only discharges aged 18 years and older are included for employment status and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported by the 47 states and jurisdictions that offered intensive outpatient substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

¹ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported by the 47 states and jurisdictions that offered short-term residential substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

NOTES: Based on linked admission and discharge data reported by the 47 states and jurisdictions that offered short-term residential substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

No. of discharges	63,071	34,897	10,570	12,796	3,444	1,364	55.3	16.8	21

¹ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported by the 47 states and jurisdictions that offered short-term residential substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

NOTES: Based on linked admission and discharge data reported to TEDS by the 48 states and jurisdictions that offered long-term residential substance use treatment and reported these data to TEDS. Comparisons among states should be made with caution. Percentages may not add to 100 percent due to rounding. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Admissions for which values were not collected or missing are excluded from the percentage base (denominator).

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

Table 9.2a. Long-term residential treatment discharges aged 12 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017

¹ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported by the 48 states and jurisdictions that offered long-term residential substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

NOTES: Based on linked admission and discharge data reported by the 48 states and jurisdictions that offered long-term residential substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

NOTES: Based on linked admission and discharge data reported by the 48 states and jurisdictions that offered long-term residential substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

¹ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported by the 48 states and jurisdictions that offered long-term residential substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

-- Quantity is zero; ‡ No discharges were reported.

¹ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported by the 16 states and jurisdictions that offered hospital residential substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

-- Quantity is zero; ‡ No discharges were reported.

NOTES: Based on linked admission and discharge data reported by the 16 states and jurisdictions that offered hospital residential substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

-- Quantity is zero.

¹ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported by the 16 states and jurisdictions that offered hospital residential substance use treatment and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

¹ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported by the 48 states and jurisdictions that offered detoxification and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

NOTES: Based on linked admission and discharge data reported by the 48 states and jurisdictions that offered detoxification and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator). SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

¹ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported by the 48 states and jurisdictions that offered detoxification and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

-- Quantity is zero.

NOTES: Based on linked admission and discharge data reported to TEDS by the 45 states and jurisdictions that offered outpatient medication-assisted opioid therapy and reported these data to TEDS. Comparisons among states should be made with caution. Percentages may not add to 100 percent due to rounding. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Admissions for which values were not collected or missing are excluded from the percentage base (denominator).

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

Table 12.2a. Outpatient medication-assisted opioid therapy discharges aged 12 years and older, by reason for discharge, treatment completion/transfer, median length of stay (LOS), and characteristics at admission: Number and row percent distribution, 2017

-- Quantity is zero; * Less than 0.05 percent; ‡ No discharges were reported.

¹ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported by the 45 states and jurisdictions that offered outpatient medication-assisted opioid therapy and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

-- Quantity is zero; ‡ No discharges were reported.

NOTES: Based on linked admission and discharge data reported by the 45 states and jurisdictions that offered outpatient medication-assisted opioid therapy and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

¹ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported by the 45 states and jurisdictions that offered outpatient medication-assisted opioid therapy and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

¹ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported by the 43 states and jurisdictions that offered medication-assisted opioid detoxification and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

¹ This information is collected at admission and may not correspond to the actual source of payment.

NOTES: Based on linked admission and discharge data reported by the 43 states and jurisdictions that offered medication-assisted opioid detoxification and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

NOTES: Based on linked admission and discharge data reported by the 43 states and jurisdictions that offered medication-assisted opioid detoxification and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

¹ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported by the 43 states and jurisdictions that offered medication-assisted opioid detoxification and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known.

-- Quantity is zero.

¹ Only discharges aged 18 years and older are included for veteran status, source of income support, employment status, and detailed not in labor force in this report.

NOTES: Based on linked admission and discharge data reported by the 43 states and jurisdictions that offered medication-assisted opioid detoxification and reported these data to TEDS. The reason for discharge category 'other' includes clients who were discharged because they were incarcerated, died, moved, became ill, were hospitalized, or another reason somewhat out of client's control, or if the client status at discharge was not known. Percentages may not add to 100 percent due to rounding. In LOS calculations, missing values of the associated variables were excluded. Admissions for which values were not collected, unknown, or missing are excluded from the percentage base (denominator).

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

‡ No data, or less than a full calendar year of data, submitted; *n/c* Not collected.

¹ Admissions reported for Census regions and divisions will not sum to the total number of admissions, because Puerto Rico is not included in any Census region or division.

² Tennessee began disaggregating heroin admissions from other opiates in July 2009. In this report, Tennessee's 2009 heroin admissions are included in the other opiates category, since there is less than a full year of disaggregated heroin data.

NOTE: Based on administrative data reported to TEDS by all reporting states and jurisdictions. Comparisons among states should be made with caution.

-- Quantity is zero; ‡ No data, or less than a full calendar year of data, submitted.

¹ Admissions reported for Census regions and divisions will not sum to the total number of admissions, because Puerto Rico is not included in any Census region or division.

² Tennessee included heroin admissions in other opiates through June 2009. In this report, Tennessee's 2009 heroin admissions are still included in the other opiates category since there is less than a full year of disaggregated heroin data.

NOTES: Based on administrative data reported to TEDS by all reporting states and jurisdictions. Comparisons among states should be made with caution. Non-heroin opiates/synthetics include codeine, hydrocodone, hydromorphone, meperidine, morphine, non-prescription methadone, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

-- Quantity is zero.

NOTES: Based on linked admission and discharge data reported to TEDS by 49 states and jurisdictions. Comparisons among states should be made with caution; see Appendix A. The discharges reported exclude codependents and discharges whose length of stay (LOS) was 0 days or whose reason for discharge was unknown/missing. Total linked discharge records may be higher than the values shown for each state due to (a) data suppression and (b) exclusion of missing values in the reason for discharge field.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

-- Quantity is zero; * Less than 0.05 percent.

NOTES: Based on linked admission and discharge data reported to TEDS by 49 states and jurisdictions. Comparisons among states should be made with caution; see Appendix A. The discharges reported exclude codependents and discharges whose length of stay (LOS) was 0 days or whose reason for discharge was unknown/missing. Total linked discharge records may be higher than the values shown for each state due to (a) data suppression and (b) exclusion of missing values in the reason for discharge field. Percentages may not add to 100 percent due to rounding.

NOTE: Excludes admissions for which the client's employment status at discharge was missing.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 11.21.18.

APPENDIX A.

ABOUT THE TREATMENT EPISODE DATA SET (TEDS)

Introduction

This report presents results from the Treatment Episode Data Set (TEDS) on the demographic and substance use characteristics of admissions to substance use treatment, and for discharges from substance use treatment. The Center for Behavioral Health Statistics and Quality (CBHSQ), Substance Abuse and Mental Health Services Administration (SAMHSA), coordinates and manages the collection of TEDS data from the states and jurisdictions.

TEDS is a compilation of client-level data routinely collected by the individual state administrative data systems to monitor their substance use treatment systems. Generally, facilities that are required to report to the state substance abuse agency (SSA) are those that receive public funds and/or are licensed or certified by the SSA to provide substance use treatment (or are administratively tracked for other reasons).

The TEDS system comprises two major components: the Admissions Data Set and the Linked Discharge Data Set. The TEDS Admission Data Set includes client-level data on substance use treatment admissions from 1992 through the present. The TEDS Linked Discharge Data Set includes discharges that can be linked at a record level to admissions; it includes information from clients discharged in 2000 and later. For both data sets, selected data items from the individual state data files are converted to a standardized format consistent across states. These standardized data constitute TEDS.

The TEDS Admission Data Set consists of a Minimum Data Set of items collected by all states, and a Supplemental Data Set where individual data items are reported at the state's option. The Minimum Data Set consists of 22 items that include:

- demographic information
- primary, secondary, and tertiary substances and their route of administration, frequency of use, and age at first use
- source of referral to treatment
- number of prior treatment episodes
- type of treatment service, including planned use of medication-assisted opioid therapy

The Supplemental Data Set items include psychiatric, social, and economic measures. Some items from the Supplemental Data Set are included in the Linked Discharge Data Set to explore how the status changes between admission and discharge.

The TEDS Linked Discharge Data Set was designed to enable TEDS to collect information on entire treatment episodes. Discharge data, when linked to admission data, represent treatment episodes that enable analyses of questions that cannot be answered with admission data alone. Examples

are the proportion of discharges that completed treatment and the average length of stay among treatment completers.

History

National-level data collection on admissions to substance use treatment was first mandated in 1972 under the Drug Abuse Office and Treatment Act, P.L. 92-255. This act initiated federal funding for drug treatment and rehabilitation and required reporting on clients entering drug (but not alcohol) use treatment. The Client-Oriented Data Acquisition Process (CODAP) was developed to collect admission and discharge data directly from federally-funded drug treatment programs. (Programs for treatment of alcohol use were not included.) Reporting was mandatory for all such programs and data were collected using a standard form. CODAP included all clients in federally-funded programs regardless of individual funding source. Reports were issued from 1973 to 1981 based on data from 1,800 to 2,000 programs, including some 200,000 annual admissions.

In 1981, the collection of national-level data on admissions to substance use treatment was discontinued because of the introduction of the Alcohol, Drug Abuse, and Mental Health Services (ADMS) Block Grant. The block grant transferred federal funding from individual programs to the states for distribution, and it included no data reporting requirement. Participation in CODAP became voluntary; although several states submitted data through 1984, the data were in no way nationally representative.

In 1988, the Comprehensive Alcohol Abuse, Drug Abuse, and Mental Health Amendments (P.L. 100-690) established a revised Substance Abuse Prevention and Treatment (SAPT) Block Grant and mandated federal data collection on clients receiving treatment for either alcohol or drug use. The Treatment Episode Data Set (TEDS) data collection effort represents the federal response to this mandate. TEDS began in 1989 with the issue of three-year development grants to states.

State Data Collection Systems

TEDS is an exceptionally large and powerful data set that covers a significant proportion of all admissions to substance use treatment. TEDS is a compilation of data collected through the individual data collection systems of the state substance abuse agencies (SSAs) for substance use treatment. States have cooperated with the federal government in the data collection process, and substantial progress has been made toward developing a standardized data set. However, because each state system is unique, and each state has unique powers and mandates, significant differences exist among state data collection systems. These differences are compounded by evolving health care payment systems, and state-to-state comparisons must be made with extreme caution.

The number and client mix of TEDS admissions do not represent the total national demand for substance use treatment or the prevalence of substance use in the general population.

States differ widely in the amount of public funding available for substance use treatment and in the constraints placed on the use of funds. States may be directed to target special populations such as pregnant women or adolescents. Where funds are limited, states may be compelled to exercise triage in admitting persons to treatment, admitting only those with the most “severe” problems. In states with higher funding levels, a larger proportion of the population in need of treatment may be admitted, including the less severely impaired.

States may include or exclude reporting by certain sectors of the treatment population, and these sectors may change over time. For example, treatment programs based in the criminal justice system may or may not be administered through the SSA. Detoxification facilities, which can generate large numbers of admissions, are not uniformly considered treatment facilities and are not uniformly reported by all states.

Table A1 presents key characteristics of state data collection systems for 2017. However, these characteristics can change as state substance use treatment systems change, and thus may be responsible for some year-to-year variation within states.

- *Facilities included.* The scope of facilities included in TEDS is affected by differences in state licensure, certification, and accreditation practices, and disbursement of public funds. Most SSAs require facilities that receive state/public funding (including federal block grant funds) for the provision of alcohol and/or drug treatment services to report data to the SSA. Generally, this funding is distributed by the SSA, but may be distributed by another public agency.

Some SSAs regulate private facilities, methadone clinics, and/or individual practitioners and require them to report TEDS data. Others do not because of the difficulty in obtaining data from these facilities, although these facilities may report voluntarily. Facilities operated by federal agencies (e.g., the Bureau of Prisons, the Department of Defense, and the Department of Veterans Affairs) generally do not report TEDS data to the SSA, although some facilities operated by the Indian Health Service are included. Hospital-based substance use treatment facilities are frequently not licensed through the SSA and do not report TEDS data. Correctional facilities (state prisons and local jails) are monitored by the SSA and report TEDS data in some states but not in others.

The primary goal of TEDS is to monitor the characteristics of clients admitted to planned, continuing treatment regimens. Thus, early intervention and crisis intervention programs that do not lead to enrollment in continued treatment are excluded from TEDS.

- *Clients included.* About 56 percent of states reported data on all admissions to eligible facilities, although some reported only, or largely, admissions financed by public funds. TEDS is an admission-based system; therefore, TEDS admissions do not represent individuals. For example, an individual admitted to treatment twice within a calendar year is counted as two admissions.
- *Ability to track multi-service episodes.* The goal for the TEDS system is to enumerate treatment episodes by distinguishing the initial admission of a client from his/her subsequent transfer to a different type of treatment service (e.g., from residential treatment to outpatient) within a single continuous treatment episode. Thus, TEDS records are ideally coded as admissions if they represent the initial treatment service in a treatment episode and as transfers if they represent a change in the type of treatment service or a change in provider without an interruption in treatment.

This requires, however, that clients be assigned unique IDs that can be linked across providers; not all states are legally and/or technologically able to do this. Most states can identify as transfers a change in the type of treatment service within the structure of a given provider; however, fewer can also identify a transfer involving a change of provider. Several states do not track

transfers, but instead report as transfers those clients who are discharged and readmitted within a specified time period defined by each state.

Because some admission records, in fact, may represent transfers, the number of admissions reported probably overestimates the number of treatment episodes. Some states reported a limited data set on codependents of substance users entering treatment. On average, from 2007 through 2017, 89 percent of all records submitted were client admissions, 11 percent were client transfers, and less than 1 percent were codependents of substance users. For the linked discharges dataset, 86 percent of all records submitted were client admissions, 14 percent were client transfers, and less than 1 percent were codependents.

- *Services offered.* A state's mix of types of treatment service (e.g., outpatient, detoxification, residential, opioid therapy) can have a significant effect on its admission rate. There is higher client turnover and therefore more admissions in short-stay services such as detoxification than in long-stay services such as outpatient or long-term residential treatment. Admission rates for individual substances used may be affected as well (e.g., detoxification is more closely associated with alcohol or heroin use than with the use of other substances).
- *Completeness and timeliness of reporting.* SAMHSA, in reporting national-level TEDS data, must balance timeliness of reporting and completeness of the data set. There may be a time lag in the publication of SAMHSA's annual report because preparation cannot begin until states have completed their data submission for that year. States, in turn, rely on individual facilities to report in a timely manner so they can submit TEDS data to SAMHSA at regular intervals.

Admissions from facilities that report late to the states will appear in a later data submission to SAMHSA, so the number of annual admissions in a report may be higher in subsequent reports. The number of additional admissions is small because of the time lag in issuing the report. Thus the percentage distributions will change very little in subsequent reports, although Census division- and state-level data may change somewhat more for states with reporting delays.

States continually review and improve their data collection and processing. When systematic errors are identified, states may revise or replace historical TEDS data files. While this process represents an improvement in the data system, the historical statistics in this report will differ slightly from those in earlier reports.

Tables A2 and A3 indicate the proportions of records by state or jurisdiction for which valid data were received for 2017. States are expected to report all variables in the Minimum Data Set (Table A2). Variables in the Supplemental Data Set are collected at each state's option (Table A3).

Tables A4 and A5 indicate the proportions of records for which valid discharge data were received in 2017.

Table A6 indicates the denominators for computing per 100,000 population estimates in 2017.

Report-Specific Considerations

National substance use treatment admissions

- This section of the report focuses on treatment admissions for substance use. Treatment admissions for codependents of substance use clients are excluded. Records for identifiable transfers within a single treatment episode are also excluded.
- Records with partially complete data have been retained. Where records include missing or invalid data for a specific variable other than primary, secondary, or tertiary substance, those records are excluded from tabulations of that variable. For substance use variables, missing or unknown responses were included in the category other/none specified. The total number of admissions on which a percentage distribution is based is reported in each table. The proportion of admissions for which the primary substance was *none reported* increased in 2017, primarily due to data processing changes in Washington state.
- The primary, secondary, and tertiary substance reported to TEDS are those substances that led to the treatment episode and not necessarily a complete enumeration of all drugs used at the time of admission.
- Primary alcohol admissions are classified as alcohol only or alcohol with secondary drug use. The latter indicates a primary alcohol admission with a specified secondary and/or tertiary drug. All other primary alcohol admissions are classified as alcohol only.
- Cocaine admissions are classified according to route of administration as smoked and other routes. Smoked cocaine primarily represents crack or rock cocaine, but can also include cocaine hydrochloride (powder cocaine) when it is free-based. Non-smoked cocaine includes all cocaine admissions where cocaine is injected, inhaled, or taken orally; it also includes admissions where the route of administration is unknown or not collected. Thus, the TEDS estimate of admissions for smoked cocaine is conservative.
- Methamphetamine/amphetamine admissions include admissions for both substances, but are primarily for methamphetamine. In 2017, methamphetamine constituted about 96 percent of combined methamphetamine/amphetamine admissions.
- For this section of the report, secondary and tertiary substances (see Appendix B) are grouped and referred to as secondary substances.

National substance use treatment discharges

- This section of the report focuses on treatment for substance use according to the type of treatment service. Thus, treatment admissions for codependents of substance use clients are excluded. Records for identifiable transfers within a single treatment episode are included.
- Records with partially complete data have been retained. Where records include missing or invalid data for a specific variable other than primary, secondary, or tertiary substance, those records are excluded from tabulations of that variable. For substance use variables, missing or unknown responses were included in the category None/other/unknown. The total number of discharges on which a percentage distribution is based is reported in each table.

- Records with missing reason for discharge are excluded from this section of the report.
- The total number of records on which a percentage distribution is based is reported in each table.
- The primary, secondary, and tertiary substances reported to TEDS are those substances that led to the treatment episode and not necessarily a complete enumeration of all drugs used at the time of admission.
- Stimulant admissions include methamphetamine, amphetamines, and other stimulants. However, most of these admissions are for methamphetamine or amphetamine abuse.
- The data presented in this section of the report focus on treatment for substance use within the type of treatment service. They do not represent complete treatment episodes, as a single episode may involve stays in more than one type of treatment service. States are asked to submit a record for each initial admission to a treatment service, for each transfer from one service to another, and for a discharge corresponding to each admission or transfer.
- The number of states reporting for treatment discharges shown in Tables 6.1 through 13.1 varies because not all states reported discharges for every type of treatment service. The first table for each section of the discharge tables details the actual number of states reporting discharges from that type of treatment service.
- Linkage of discharge records from 2017 to admission records from 2000 to 2017 means that the maximum length of stay (LOS) in treatment included in this report is 18 years. However, outpatient medication-assisted opioid therapy can have a much longer duration. Indeed, some admissions may receive this form of treatment indefinitely. Because this section includes data only on discharges, it will underestimate LOS in treatment for those receiving outpatient medication-assisted opioid therapy. Similarly, the number and proportion of treatment completers will reflect only those that have been discharged because treatment is complete and not those that successfully remain in long-term outpatient medication-assisted opioid therapy. In addition, the characteristics at admission of those admitted to and discharged from outpatient medication-assisted opioid therapy within 18 years may differ from those of admissions that remain in outpatient medication-assisted opioid therapy for longer than 18 years.

Table A1. State data system reporting characteristics, 2017

State or jurisdiction	Facilities reporting TEDS data to the state SSA		Eligible clients	Change of service within episode	Change of provider within episode
	Facilities required to report to the state SSA ¹	Facilities reporting voluntarily to the state SSA			
Alabama	Facilities that receive state/public funding	None	All clients in facility	Admission	Admission
Alaska	Facilities that receive state/public funding	None	All clients in facility who receive substance use treatment services	Admission and Discharge (for most providers) Transfer (for some providers)	Admission
Arizona	Facilities that receive state/public funding	None	State/public-funded clients only	<i>n/a</i> ²	<i>n/a</i> ²
Arkansas	Facilities that are licensed by state SSA	Some private facilities	All clients in a licensed facility	Transfer	Admission
California	Facilities that receive state/public funding. All licensed narcotic treatment facilities.	None	All clients in facility except DUI	Admission	Admission
Colorado	State-licensed facilities Methadone facilities Community-based juvenile and adult justice treatment programs, except institutionally based	None	All clients receiving substance use treatment services in facility	Admission	Admission
Connecticut	Facilities that receive state/public funding Facilities serving adults that are licensed by state Dept of Public Health Some facilities treating youth (less than 18 years old) General hospitals funded by SSA	None	State/public-funded clients only	Admission	Admission
Delaware	Facilities that receive state/public funding, excluding: - Child/youth services - Most Medicaid-funded services - Most criminal justice system services	None	State/public-funded clients only	Admission	Admission
Dist. of Columbia	Facilities that receive state/public funding	None	State/public-funded clients only	Transfer	Admission

SC-EST2017-alldata6: Annual State Resident Population Estimates for 6 Race Groups (5 Race Alone Groups and Two or More Races) by Age, Sex, and Hispanic Origin: April 1, 2010 to July 1, 2017. SC-EST2009-alldata6: Annual State Resident Population Estimates for 6 Race Groups (5 Race Alone Groups and Two or More Races) by Age, Sex, and Hispanic Origin: April 1, 2000 to July 1, 2009. PRC-EST00INT-AGESEX: Intercensal Estimates of the Resident Population by Single Year of Age and Sex for Puerto Rico: April 1, 2000 to July 1, 2010. PEPSYASEX: Annual Estimates of the Resident Population by Single Year of Age and Sex for the United States, States, and Puerto Rico Commonwealth: April 1, 2010 to July 1, 2017.

APPENDIX B. TEDS DATA ELEMENTS

TEDS Minimum Data Set

Age of first use (primary, secondary, and tertiary substance)

For drugs other than alcohol, these fields identify the age at which the client first used the respective substance. For alcohol, these fields record the age of first intoxication.

- 0—Indicates a newborn with a substance dependency problem
- 1–95—Indicates the age at first use

Client or codependent/collateral

Specifies whether the admission record is for a substance use treatment client, or a person being treated for his/her codependency or collateral relationship with a substance user.

- Client—Must meet all of the following criteria:
 - Has an alcohol or drug related disorder
 - Has completed the screening and intake process
 - Has been formally admitted for treatment or recovery service in an alcohol or drug treatment unit
 - Has his or her own client record

A person is not a client if he or she has completed only a screening or intake process or has been placed on a waiting list.

- Codependent/collateral—Must meet all of the following criteria:
 - Has no alcohol or drug related disorder
 - Is seeking services because of concerns arising from his or her relationship with an alcohol or drug user
 - Has been formally admitted for service to a treatment unit
 - Has his or her own client record or has a record within a primary client record

Guidelines: Reporting of data for *Codependent/collaterals* is optional. If the state opts to report codependent/collateral clients, the mandatory fields are *State code*, *Provider identifier*, *Client identifier*, *Client transaction type*, *Codependent/collateral*, and *Date of admission*. Reporting of the remaining fields in the TEDS Minimum and Supplemental Data Sets is optional. For all items not reported, the data field should be coded with the appropriate “Not collected” or “Not applicable” code.

If a substance use client with an existing record in TEDS becomes a codependent, a new client record should be submitted indicating that the client has been admitted as a codependent, and vice versa.

If a record does not include a value for this field, it is assumed to be a substance use client record.

Date of admission

The day when the client receives his or her first direct treatment or recovery service. For transfers, this is the date when the client receives his or her first direct treatment after the transfer has occurred.

Demographics

Age

Identifies the client's age at admission. Derived from client's date of birth and date of admission.

- 0—Indicates a newborn with a substance dependency problem
- 1–95—Indicates the age at admission

Education

Specifies the highest school grade (number of school years) completed by the client.

- 0—Less than one grade completed
- 1–25—Years of school (highest grade) completed. For General Equivalency Degree, use 12.

Guidelines: States that use specific categories for designating education level should map their codes to a logical number of years of school completed. For Associate's Degree, use 14. For Bachelor's degree, use 16.

Employment status

Identifies the client's employment status at the time of admission or transfer.

- Full time—Working 35 hours or more each week, including active duty members of the uniformed services
- Part time—Working fewer than 35 hours each week
- Unemployed—Looking for work during the past 30 days, or on layoff from a job
- Not in labor force—Not looking for work during the past 30 days, or a student, homemaker, disabled, retired, or an inmate of an institution. Clients in this category are further defined in the TEDS Supplemental Data Set item Detailed not in labor force.

Guidelines: Seasonal workers are coded in this category based on their employment status at admission.

Ethnicity

Identifies the client's specific Hispanic origin.

- Cuban—Of Cuban origin, regardless of race
- Hispanic (specific origin not specified)—Of Hispanic origin, but specific origin not known or not specified
- Mexican—Of Mexican origin, regardless of race
- Not of Hispanic origin
- Other specific Hispanic—Of known Central or South American or any other Spanish cultural origin (including Spain), other than Puerto Rican, Mexican, or Cuban, regardless of race
- Puerto Rican—Of Puerto Rican origin, regardless of race

Guidelines: If a state does not collect specific Hispanic detail, code *Ethnicity* for Hispanics as *Hispanic (specific origin not specified)*.

Race

Specifies the client's race.

- Alaska Native (Aleut, Eskimo, Indian)—Origins in any of the original people of Alaska
- American Indian (other than Alaska Native)—Origins in any of the original people of North America and South America (including Central America) and who maintains cultural identification through tribal affiliation or community attachment
- Asian or Pacific Islander—Origins in any of the original people of the Far East, the Indian subcontinent, Southeast Asia, or the Pacific islands
- Asian—Origins in any of the original people of the Far East, the Indian subcontinent, or Southeast Asia, including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Philippine Islands, Thailand, and Vietnam
- Native Hawaiian or Other Pacific Islander—Origins in any of the original people of Hawaii, Guam, Samoa, or other Pacific islands
- Black or African American—Origins in any of the black racial groups of Africa
- White—Origins in any of the original people of Europe, North Africa, or the Middle East
- Other single race—Client is not classified in any category above or whose origin group, because of area custom, is regarded as a racial class distinct from the above categories
- Two or more races—For use when the state data system allows multiple race selection and more than one race is indicated

Guidelines: If a state does not distinguish between American Indian and Alaska Native, both should be coded as American Indian. If a state does not distinguish between Asian and Native Hawaiian or other Pacific Islander, both should be coded as Asian or Pacific Islander. For states that collect multiple races: (a) when a single race is designated, the specific race code should be used; (b) if the state collects a primary or preferred race along with additional races, the code for the primary/preferred race should be used; (c) if the state uses a system such as an algorithm to select a single

race when multiple races have been designated, the same system may be used to determine the race code for TEDS. When two or more races have been designated and neither (b) nor (c) above apply, the TEDS code for *Two or more races* should be used.

Sex

Identifies the client's gender.

- Male
- Female

Substance Use and Treatment Characteristics

Frequency of use (primary, secondary, and tertiary substances)

Identifies the frequency of use for the client's primary, secondary, and tertiary *substance use*.

- No use in the past month
- 1–3 times in the past month
- 1–2 times in the past week
- 3–6 times in the past week
- Daily

Medication-assisted opioid therapy

Identifies whether the use of methadone, naltrexone or buprenorphine is part of the client's treatment plan.

- Yes
- No

Number of prior treatment episodes

Indicates the number of previous treatment episodes the client has received in any drug or alcohol program. Changes in service for the same episode (transfers) should not be counted as separate prior episodes.

- 0 previous episodes
- 1 previous episode
- 2 previous episodes
- 3 previous episodes
- 4 previous episodes
- 5 or more previous episodes

Guidelines: It is preferred that the number of prior treatments be a self-reporting field collected at the time of client intake. However, this data item may be derived from the state data system if the system has that capability and episodes can be counted for at least several years.

Principal source of referral

Describes the person or agency referring the client to the alcohol or drug use treatment program.

- Alcohol/drug use care provider—Any program, clinic, or other health care provider whose principal objective is treating clients with substance use disorder, or a program whose activities are related to alcohol or other drug use prevention, education, or treatment
- Court/criminal justice referral/DUI/DWI—Any police official, judge, prosecutor, probation officer, or other person affiliated with a federal, state, or county judicial system. Includes referral by a court for DWI/DUI, clients referred in lieu of or for deferred prosecution, or during pretrial release, or before or after official adjudication. Includes clients on pre-parole, pre-release, work or home furlough, or TASC. Client need not be officially designated as “on parole.” Includes clients referred through civil commitment. Client referrals on this category are further defined in the TEDS Supplemental Data Set item Detailed criminal justice referral.
- Employer/EAP—A supervisor or an employee counselor
- Individual (includes self-referral)—Includes the client, a family member, friend, or any other individual who would not be included in any of the following categories; includes self-referral due to pending DWI/DUI
- Other community referral—Community or religious organization or any federal, state, or local agency that provides aid in the areas of poverty relief, unemployment, shelter, or social welfare. Self-help groups such as Alcoholics Anonymous (AA), Al-Anon, and Narcotics Anonymous (NA) are also included in this category. Defense attorneys are included in this category.
- Other health care provider—A physician, psychiatrist, or other licensed health care professional; or a general hospital, psychiatric hospital, mental health program, or nursing home
- School (educational)—A school principal, counselor, or teacher; or a student assistance program (SAP), the school system, or an educational agency

Substance use (primary, secondary, or tertiary)

Identifies the client’s primary, secondary, and tertiary substance use. Each *Substance use* (primary, secondary, and tertiary) has associated fields for *Route of administration*, *Frequency of use*, *Age at first use*, and the TEDS Supplemental Data Set item *Detailed drug code*.

- Alcohol
- Barbiturates—Amobarbital, pentobarbital, phenobarbital, secobarbital, etc.
- Benzodiazepines—Includes alprazolam, chlordiazepoxide, clonazepam, clorazepate, diazepam, flunitrazepam, flurazepam, halazepam, lorazepam, oxazepam, prazepam, temazepam, triazolam, and other unspecified benzodiazepines
- Cocaine/crack

- Heroin
- Inhalants—Includes chloroform, ether, gasoline, glue, nitrous oxide, paint thinner, etc.
- Marijuana/hashish—Includes THC and any other cannabis sativa preparations
- Methamphetamine
- Non-prescription methadone
- Other amphetamines—Includes amphetamines, MDMA, phenmetrazine, and other unspecified amines and related drugs
- Other hallucinogens—Includes LSD, DMT, STP, hallucinogens, mescaline, peyote, psilocybin, etc.
- Other non-barbiturate sedatives or hypnotics—Includes chloral hydrate, ethchlorvynol, glutethimide, methaqualone, and other non-barbiturate sedatives or hypnotics
- Other non-benzodiazepine tranquilizers—Includes meprobamate and other non-benzodiazepine tranquilizers
- Other opiates and synthetics—Includes buprenorphine, codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects
- Other stimulants—Includes methylphenidate and any other stimulants
- Over-the-counter medications—Includes aspirin, cough syrup, diphenhydramine and other antihistamines, sleep aids, and any other legally obtained nonprescription medication
- PCP—Phencyclidine
- Other—Includes diphenylhydantoin/phenytoin, GHB/GBL, ketamine, etc.
- None

Guidelines: Substance use is further defined in the TEDS Supplemental Data Set item *Detailed drug code*. For guidance on which specific substances to include in the substance categories, please refer to the detailed drug categories listed for Detailed drug code.

Data set considerations for *Substance use* and *Route of administration*:

For states that do collect *Detailed drug code*—Records may have duplicate *Substance use* and identical *Route of administration* if the corresponding *Detailed drug codes* are different or are “multiple” drug codes.

For states that do not collect *Detailed drug code*—A record may not have duplicate *Substance use* with identical *Routes of administration*.

Transaction type

Identifies whether a record is for an initial admission or a transfer/change in service. Note: Some states may use other terminology such as “initial admission” and “transfer admission” in place of “admission” and “transfer.”

- A—Admission
- T—Transfer/change in service

Guidelines: For TEDS, a treatment episode is defined as that period of service between the beginning of treatment for drug or alcohol use and the termination of services for the prescribed treatment plan. The episode includes one admission (when services begin) and at least one discharge (when services end). Within a treatment episode, a client may transfer to a different service, facility, provider, program, or location. Each admission and transfer record should have an associated discharge record.

When it is feasible for the state to identify transfers, they should be reported as transfers in admissions data submissions. When admissions and transfers cannot be differentiated in a state data system, such changes in service or facility should be reported to TEDS as admissions.

Data set considerations for transfers:

- All fields from the transfer record should be updated to reflect values at the time of transfer except the following fields, which must have the same values as in the associated (preceding) admission record: *Client ID*, *Codependent/collateral*, *Date of birth*, *Sex*, *Race*, and *Ethnicity*. If a field cannot be updated, it should be transmitted to TEDS with its value from the associated (preceding) admission record.
- *Date of admission* is defined as the date services begin after the transfer to another service or facility.

Type of treatment service

Describes the type of service and treatment setting in which the client is placed at the time of admission or transfer.

- Ambulatory, detoxification—Outpatient treatment services providing for safe withdrawal in an ambulatory setting (pharmacological or non-pharmacological)
- Ambulatory, intensive outpatient—As a minimum, the client must receive treatment lasting two or more hours per day for three or more days per week
- Ambulatory, non-intensive outpatient—Ambulatory treatment services including individual, family, and/or group services, and may include pharmacological therapies
- Detoxification, 24-hour service, free-standing residential—24-hour per day services in a non-hospital setting providing for safe withdrawal and transition to ongoing treatment
- Detoxification, 24-hour service, hospital inpatient—24-hour per day medical acute care services in a hospital setting for detoxification of persons with severe medical complications associated with withdrawal

- Rehabilitation/residential, hospital (other than detoxification)—24-hour per day medical care in a hospital facility in conjunction with treatment services for alcohol and other drug use and dependency
- Rehabilitation/residential, short-term (30 days or fewer)—Typically, 30 days or less of non-acute care in a setting with treatment services for alcohol and other drug use and dependency
- Rehabilitation/residential, long-term (more than 30 days)—Typically, more than 30 days of non-acute care in a setting with treatment services for alcohol and other drug use and dependency; this may include transitional living arrangements such as halfway houses

Usual route of administration (primary, secondary, and tertiary substances)

Identifies the usual route of administration of the respective *substance use*.

- Inhalation
- Injection (IV or intramuscular)
- Oral
- Smoking
- Other

TEDS Supplemental Data Set

Days waiting to enter treatment

Indicates the number of days from the first contact or request for service until the client was admitted and the first clinical service was provided.

- 0–996—Number of days waiting

Guidelines: This item is intended to capture the number of days the client must wait to begin treatment because of program capacity, treatment availability, admissions requirements, or other program requirements. It should not include time delays caused by client unavailability or client failure to meet any requirement or obligation.

Detailed criminal justice referral

Provides more information about those clients who are coded as “Court/criminal justice referral/DUI/DWI” in the TEDS Minimum Data Set item *Principal source of referral*.

- Diversionary program (e.g., TASC)
- DUI/DWI
- Other court (not state or federal)
- Other recognized legal entity (e.g., local law enforcement agency, corrections agency, youth services, review board/agency)
- Prison
- Probation/parole
- State/federal court
- Other
- Not applicable

Detailed drug code (primary, secondary, and tertiary substances)

Identifies, in greater detail, the drug use recorded in the TEDS Minimum Data Set item *Substance use*.

- Aerosols
- Alcohol
- Alprazolam (Xanax)
- Amphetamines
- Anesthetics
- Chlordiazepoxide (Librium)
- Clonazepam (Klonopin, Rivotril)

- Clorazepate (Tranxene)
- Codeine
- Crack
- Diazepam (Valium)
- Diphenhydramine
- Diphenylhydantoin/phenytoin (Dilantin)
- Ethchlorvynol (Placidyl)
- Flunitrazepam (Rohypnol)
- Flurazepam (Dalmane)
- GHB/GBL (gamma-hydroxybutyrate, gamma-butyrolactone)
- Glutethimide (Doriden)
- Heroin
- Hydrocodone (Vicodin)
- Hydromorphone (Dilaudid)
- Ketamine (Special K)
- Lorazepam (Ativan)
- LSD
- Marijuana/hashish
- Meperidine (Demerol)
- Meprobamate (Miltown)
- Methadone (non-prescription)
- Methamphetamine/speed
- Methaqualone
- Methylenedioxymethamphetamine (MDMA, Ecstasy)
- Methylphenidate (Ritalin)
- Nitrites

Detailed not in labor force

Provides more information about those clients who are coded as “Not in labor force” in the TEDS Minimum Data Set item *Employment status*.

- Disabled

- Homemaker
- Inmate of institution (prison or institution that keeps a person, otherwise able, from entering the labor force)
- Retired
- Student
- Other
- Not applicable

DSM criteria diagnosis

Specifies the diagnosis of the substance use disorder from the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders*.

Expected/actual primary source of payment

Identifies the primary source of payment for this treatment episode.

- Blue Cross/Blue Shield
- Medicaid
- Medicare
- Other government payments
- Other health insurance companies
- Self-pay
- Worker's compensation
- No charge (free, charity, special research, or teaching)
- Other

Frequency of attendance at self-help programs

Records the number of times the client has attended a self-help program in the 30 days preceding the date of admission to treatment services.

- No attendance in the past month
- 1–3 times in the past month
- 4–7 times in the past month
- 8–15 times in the past month
- 16–30 times in the past month
- Some attendance in the past month, but frequency unknown

Health insurance

Specifies the client's health insurance (if any). The insurance may or may not cover alcohol or drug treatment.

- Blue Cross/Blue Shield
- Health maintenance organization (HMO)
- Medicaid
- Medicare
- Private insurance (other than Blue Cross/Blue Shield or an HMO)
- Other (e.g., TRICARE)
- None

Living arrangements

Specifies whether the client is homeless, living with parents, in a supervised setting, or living on his or her own.

- Dependent living—Clients living in a supervised setting such as a residential institution, halfway house, or group home, and children (under age 18) living with parents, relatives, or guardians, or in foster care
- Homeless—Clients with no fixed address; includes shelters
- Independent living—Clients living alone or with others without supervision

Marital status

Describes the client's marital status. The following categories are compatible with the U.S. Census.

- Divorced
- Never married—Includes clients whose only marriage was annulled
- Now married—Includes those living together as married
- Separated—Includes those separated legally or otherwise absent from spouse because of marital discord
- Widowed

Number of arrests in the 30 days prior to admission

Records the number of arrests in the 30 days preceding the date of admission to treatment services.

- 0–96—Number of arrests

Pregnant at admission

Specifies whether the client was pregnant at the time of admission.

- Yes
- No
- Not applicable. Use this code for male clients.

Co-occurring mental and substance use disorders

Identifies whether the client has a psychiatric disorder in addition to his or her alcohol or drug use disorder.

- Yes
- No

Source of income/support

Identifies the client's principal source of financial support. For children under 18, this field indicates the parents' primary source of income/support.

- Disability
- Public assistance
- Retirement/pension
- Wages/salary
- Other
- None

Veteran status

Identifies whether the client has served in the uniformed services (Army, Navy, Air Force, Marines, Coast Guard, Public Health Service Commissioned Corps, Coast and Geodetic Survey, etc.).

- Yes
- No

TEDS Linked Discharge Data Set

Date of discharge

The date when the client was formally discharged from the treatment facility or service. The date may be the same as the date of last contact. In the event of a change of service or provider within an episode of treatment, it is the date the service terminated or the date the treatment ended at a particular provider.

Date of last contact

The date when the client was last seen for a treatment. The date may be the same as the date of discharge. In the event of a change of service or provider within an episode of treatment, it is the date the client transferred to another service or provider.

Detailed not in labor force at admission/discharge

Records more detailed information about those clients who are coded as *Not in labor force* in the TEDS Minimum Data Set item *Employment status*.

- Disabled
- Homemaker
- Inmate of institution (prison or institution that keeps a person, otherwise able, from entering the labor force)
- Other
- Retired
- Student

Employment status at discharge

See TEDS Minimum Data Set item *Employment status* for definitions.

Frequency of attendance at self-help programs in 30 days prior to admission/discharge

Records the number of times the client has attended a self-help program in the 30 days preceding the date of admission to and discharge from treatment services.

- No attendance in the past month
- 1–3 times in the past month
- 4–7 times in the past month
- 8–15 times in the past month
- 16–30 times in the past month
- Some attendance in the past month, but frequency unknown

Frequency of use at discharge (primary, secondary, and tertiary substances)

See TEDS Minimum Data Set item *Frequency of use* for definitions.

Living arrangements at admission/discharge

Records whether the client is homeless, living with parents, in a supervised setting, or living on his or her own at the time of admission and discharge.

- Dependent living—Clients living in a supervised setting such as a residential institution, halfway house, or group home, and children (under age 18) living with parents, relatives, or guardians or in foster care
- Homeless—Clients with no fixed address; includes shelters
- Independent living—Clients living alone or with others without supervision

Number of arrests in 30 days prior to admission/discharge

Records the number of arrests in the 30 days preceding the date of admission to and discharge from treatment services.

- 0–96—Number of arrests

Reason for discharge, transfer, or discontinuance of treatment

Indicates the outcome of treatment or the reason for transfer or discontinuance of treatment.

- Death
- Incarcerated—Jail, prison, house confinement
- Left against professional advice (dropped out)—Client chose not to complete treatment program, with or without specific advice to continue treatment; includes clients who dropped out for unknown reasons and clients who did not receive a treatment service for some time and were discharged for administrative reasons
- Terminated by facility—Treatment terminated by action of facility, generally because of client non-compliance or violation of rules, laws, or procedures (excludes client drop-out, incarceration, or client-motivated reason for discontinuance)
- Transferred to another substance use program or facility—Client was transferred to another substance use treatment service type, program, provider, or facility; client may or may not have reported to the new program or facility
- Treatment completed—All parts of the treatment plan or program were completed.
- Other—Client moved, became ill, was hospitalized, or other reason somewhat out of client's control
- Unknown—Client status at discharge not known (e.g., record incomplete or lost); not to be used for clients who dropped out of treatment

Substance use at discharge (primary, secondary, or tertiary)

See TEDS Minimum Data Set item *Substance use* for definitions.

Type of treatment service at discharge

See TEDS Minimum Data Set item *Type of treatment service* for definitions.

APPENDIX C.

LIST OF CONTRIBUTORS

This report was prepared for the Center for Behavioral Health Statistics and Quality (CBHSQ), Substance Abuse and Mental Health Services Administration, U.S. Department of Health and Human Services (HHS), by Eagle Technologies, Inc., under Contract No. HHSS283201600001C.

Contributors and reviewers at Eagle, listed alphabetically, include Ngwatung Akamangwa, Anand Borse, Muluneh Desisa, Marty van Duym, Tsegereda Kifle, Carissa Marcelle, David Peabody, Parth Thakore, and Doren Walker (Project Director). Production of the report at SAMHSA was managed by Cathie Alderks (COR). SAMHSA contributors and reviewers, listed alphabetically, include: Cathie Alderks, Herman Alvarado, Elizabeth Hoeffel, Heydy Juarez, Sharon Liu, and Nichele Waller.
