# Background

# Systems Mapping at a Glance

# Applied in 30 US states and 18 countries

## Proactive:

- **AMR National Action Planning (Govt-led with FAO) - Cambodia, Laos**
- One Health Implementation Planning (Govt-led with P&R, FAO) - Ethiopia, Uzbekistan
- Zoonotic Disease planning (with USDA, CDC- ZDPT)- Pakistan, US
- **Zoonotic Disease Workforce Planning (OHW: OHCEA-led, P&R, FAO) - Rwanda, Uganda, Senegal, Cameroon, Tanzania, Ethiopia**
- Petting zoo zoonotic disease risk (State gov't led, with USDA)-US
- Climate change- related emergency planning (with USDA, Arctic Council-led)- Circumpolar countries
- Select agent planning (Govt-led, with DTRA, USDA)- Turkey
- **Rabies National Action Plan development (INDOHUN-led on own) - Indonesia**
- **Operationalizing OH at provincial level (INDOHUN-led) - Indonesia**
- Climate change disease risk (USDA-led) - US
- Food-borne illness rapid response planning (State Gov't led, with USDA)- US

## Retroactive:

- AI After Action Review (with USDA)- US

## Just in time:

- Ebola response (State Govt-led on own), Texas, US
- Chronic Wasting Disease coordination and collaboration (State-led, with USDA) - US

# Value of Process Mapping

- **It's all about the process**
  - Value in not knowing every step or every player
- **Viewing the system 'as is'**
  - There is some level of existing cross-sectoral interaction – both formal and informal
- **Opportunity:** Jointly build on the existing system
  - Mapping often leads to finding new stakeholders

# Examples: Operational Applications

- MN HPAI Response (2015-2016)
- National Antimicrobial Resistance Action Planning (Lower Mekong)

**110 poultry flocks**

**9.5 million birds**

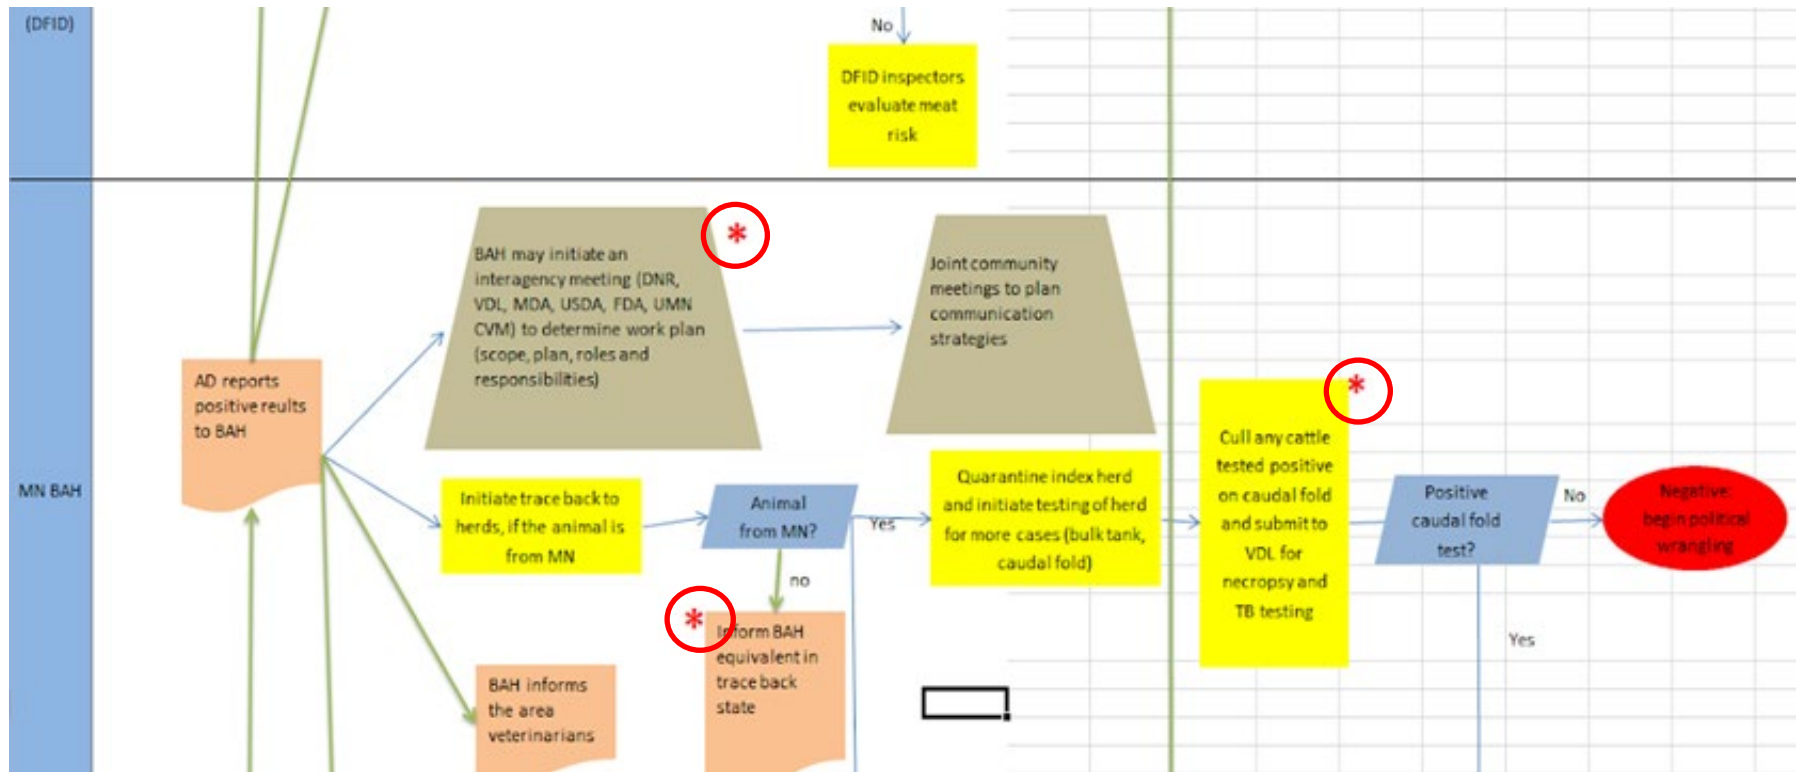

**520 responders**

**\$650 million**

# MINNESOTA RESPONDS TO AVIAN INFLUENZA

# MN HPAI Outcomes –

**NEW!**

- **Policies and Practices** notification & information sharing
- **Operational Framework for Multisectoral response**  
revised animal health emergency response positions to identify those open to various disciplines/experts
- **Improved Coordination** dedicated position for public health on animal health response team
- **Improved information sharing** portal with different levels of access to facilitate sharing information about infected premises, quarantine zones, and movement restrictions

# Antimicrobial Resistance Planning: OH-SMART in Lower Mekong

UNIVERSITY  
OF MINNESOTA  
Driven to Discover™

One Health Systems  
Mapping and Analysis  
Resource Toolkit

- OH Leadership and OH-SMART training Feb 2017
- OH-SMART workshop in each country
- Collaborating with FAO and WHO to support Antimicrobial Resistance (AMR) National Action Planning

# Results

- Updated AMR National Action Plans and Road Maps.
- Themes and gaps identified for AMR systems
- Multi-sectoral agreement on gaps and resolutions and specific action steps identified to achieve resolutions.
- Action plans created

# Why OH-SMART™?

- **Visualizes** the existing system
- **Applicable** and **adaptable** to any process
- **Platform** for positive interactive dialogue, creativity and innovation
- **Builds** shared leadership and vision across disciplines, sectors, cultures
- Moves One Health from **theory to application**
