

# Education Activities Panel

Presented to the Advisory Committee on Heritable Disorders in  
Newborns and Children

November 1, 2018

Moderator: Beth Tarini, MD, MS

# Goal of the Panel

- Highlight the critical role of education in NBS
- Feature the achievements and ongoing activities in NBS education
- Foster discussion and spark ideas for future collaborations/projects

# Background

## Educate

- *To provide with information*
- *To train by formal instruction and supervised practice especially in a skill, trade, or profession*

-Merriam-Webster

# Role of Education in NBS

## Sobre las pruebas de detección prenatales & en el recién nacido

Las pruebas de detección prenatales aseguran de que tú y tu bebé estén en camino a un embarazo sano. También preparan a los padres antes del nacimiento para que se enteren sobre posibles condiciones de salud y tratamientos.

Las pruebas de detección en recién nacidos son un programa de salud pública estatal que busca detectar condiciones graves y tratables. Los bebés cuyas pruebas de detección dan resultados positivos a condiciones tratables, podrán comenzar con un tratamiento antes de tener efectos dañinos.

### La prueba de sangre

Se extraen unas gotas de sangre del talón del bebé y se colocan en un tarjetón especial que se usa en las pruebas de detección. Este tarjetón es enviado al laboratorio estatal para un análisis.

### La evaluación auditiva

Determina si el oído y el tronco cerebral responden al sonido. Si no hay respuesta, puede señalar la pérdida auditiva.

### La prueba de pulsioximetría

Un sensor mide el oxígeno en la sangre y puede detectar la cardiopatía congénita crítica (CCHD).

## ¿Por qué son tan importantes las pruebas de detección?

Aun los bebés que tienen aspecto sano y provienen de familias sanas, pueden presentarse con condiciones médicas serias. Las pruebas de detección ayudan a que los profesionales médicos identifiquen y traten condiciones antes de que se enferme el bebé. La mayoría de los bebés identificados al nacer reciben tratamiento temprano y crecen saludables.

Nacen más de **4 millones** de bebés cada año en los Estados Unidos.

La mayoría de los estados realizan pruebas para detectar 29 de las 34 condiciones médicas recomendadas

Cada año, **12,000** bebés con condiciones graves pero tratables crecen sanos gracias a las pruebas de detección.

A todo bebé que nace en los Estados Unidos le puede hacer las pruebas de detección.

Las pruebas de detección son uno de los mayores logros de la salud pública del siglo XX.

Según los Centros de Control y Prevención de Enfermedades (CDC)

## La perspectiva de una madre

"Las pruebas de detección le salvaron la vida a mi hijo. A pesar de que tenía un aspecto perfectamente sano y que en nuestra familia no hubo un historial médico de cualquier trastorno, su prueba dio un resultado positivo para una condición metabólica llamada la MCADD. Gracias a la información que obtuvimos a través de sus pruebas de detección, es un niño completamente sano y sabemos cómo cuidarlo para que se mantenga así."

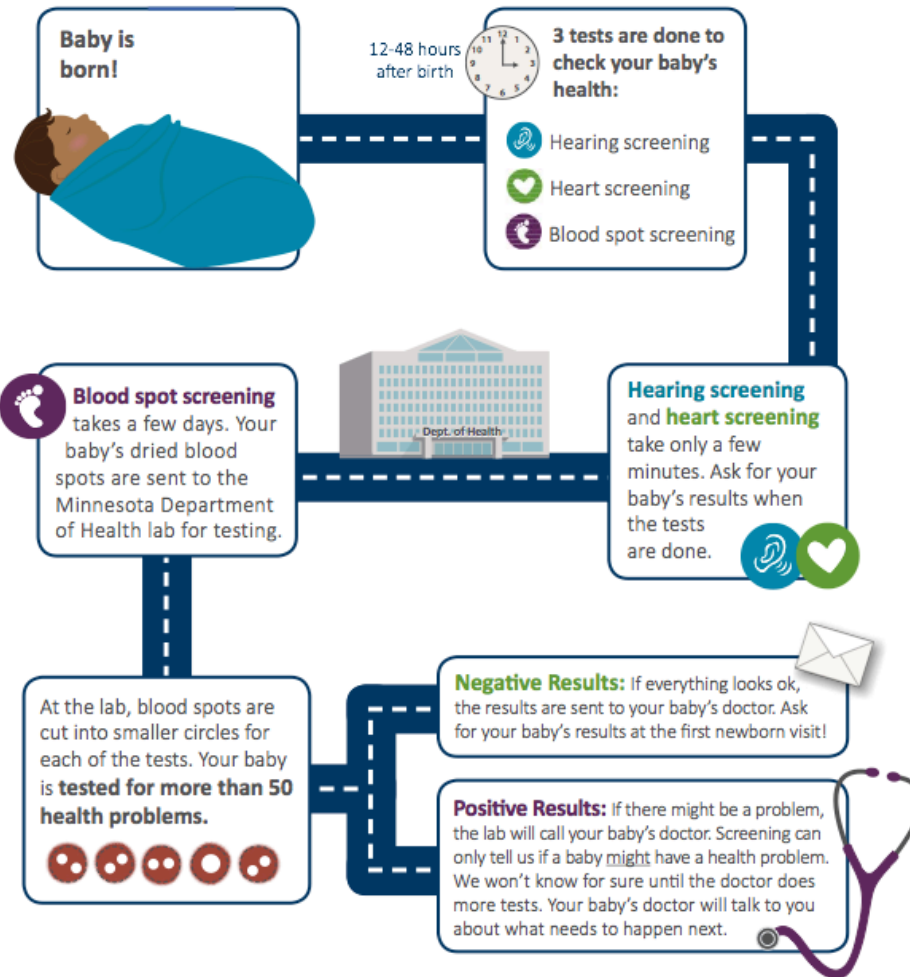

"Les ruego a todos los nuevos padres que aprendan sobre el potencial de las pruebas de detección para salvar vidas, y que agradezcan al personal del hospital que realizan estas importantes pruebas que protegen la salud y la seguridad de su recién nacido."

- Una madre agradecida de Colorado

Este proyecto es financiado por el acuerdo de cooperación BHS6MCH1550 del Maternal and Child Health Bureau (MCHB), Health Resources and Services Administration (HRSA)

# Newborn Screening

## How does it work?

## Serving the Family From Birth to the Medical Home

### Newborn Screening: A Blueprint for the Future

#### A Call for a National Agenda on

## I. BACKGROUND

**N**ewborn screening in the United States is a public health program aimed at the early identification of conditions for which early and timely interventions can lead to the elimination or reduction of associated mortality, morbidity, and disabilities. This screening takes place within the context of a newborn screening system, and involves the following components: screening, short-term follow-up, diagnosis, treatment/management, and evaluation. Inherent to each of these components is an education process.

## Communication Guide

**THIS GUIDE WILL HELP YOU EFFECTIVELY COMMUNICATE [POSITIVE]\* NEWBORN SCREENING RESULTS TO PARENTS.**

Because this type of communication is not a routine activity for the primary care provider, the information below may be used to help frame the discussion with families to improve understanding of the screening result, adherence to follow-up recommendations, and the family's overall experience with newborn screening.

Families who have had [positive]\* newborn screening results have suggested that the following key points are important in helping families cope with the uncertainty of a [positive]\* newborn screening result and understand the next steps needed to gain certainty.

**S**hare the specific [positive]\* newborn screening result and associated condition(s) with the family.

- Help the family understand that a [positive]\* newborn screening result is serious, but that you are there to help guide them through the next steps.

**C**omprehension: Assess the family's understanding of newborn screening.

- Assess if the family recalls and understands the process of newborn screening.

**R**emiterate what screening is and is not.

- Remind the family about the purpose of newborn screening and that it is not a diagnostic test, so it is important that timely follow-up confirmatory testing be done.

**E**ngage with the family and provide information at their desired level and pace.

- Offer to provide the family additional result-specific information provided by the state newborn screening program.
- Discuss information using non-medical terms, at the family's pace and desired level of detail.

**E**xplore the family's emotions.

- Explore with the family how they might use their support system or other support resources now and as they go through the diagnostic process.
- Remember there is a wide spectrum of how families may cope with this result (anxiety to denial). Tailor your discussion to help the family hear and retain the information discussed.

**N**ext steps: Discuss a shared plan and provide resources.

- Discuss with the family a shared plan that is concrete, specific, and includes the following:
  - Where, when, and with whom is the next appointment?
  - What testing will be considered and/or done?
  - What should they watch for in their child while they wait?
  - Who can they contact if they have additional questions or concerns?
- Assess the family's understanding of the visit and information provided using teach-back methods, and provide valid websites for them to get more information.

*\*A positive newborn screening result can also be referred to as an abnormal result, an out-of-range result, or presumptive positive result.*

# ACHDNC: New Ad-hoc Workgroup

- Joint effort - Committee Members, Education and Training Workgroup members, and Laboratory Standards and Procedures Workgroup members
- Address opportunities and challenges related to interpretation of newborn screening results
  - Communicating the strengths and limitations of newborn screening results
  - Educating different audiences – providers, parents, and the public

# Panel Presentations

- **Jaclyn Seisman, MPH, Assistant Director of Maternal & Child Health, Genetic Alliance**
  - Summary from the Education and Engagement Summit
- **Debra Freedenberg, MD, PhD, Medical Director, NBS and Genetics, Texas Dept of State Health Services**
  - Creation of X-ALD education materials - retrospective comparison of the process used with the framework developed post Summit
- **Susan Berry, MD, Committee Member, Professor & Director of Division of Genetics and Metabolism, University of Minnesota**
  - Development (who, what, why, how) of the “Newborn Screening: More Than a PKU Screen” educational tool – using it in the field
- **Kim Piper, RN, Executive Officer, Center for Congenital & Inherited Disorders, Iowa**
  - Using a Deliberative Community Engagement process to inform Iowa’s NBS Program processes and education efforts
- **Q&A/Discussion**
